ACADEMIC STAFF

DEAN Professor H.D. van Schalkwyk

VICE DEAN Professor N.J.L. Heideman

PROGRAMME DIRECTORS

Actuarial Sciences and Risk Analysis	Mr K.N. Bekker - 051 401 3417
Agriculture	Prof. J.B. van Wyk - 051 401 2677
Architecture	Mr H.B. Pretorius - 051 401 3021
Biological Sciences	Prof. J.J. Spies - 051 401 2261
Building Sciences	Mr F.H. Berry - 051 401 2198
Consumer Science	Prof. H.J.H. Steyn - 051 401 2304
Geosciences	Dr H.E. Praekelt - 051 401 2373
Information Technology	Dr A. van Biljon - 051 401 3701
Mathematical Sciences	Prof. S.W. Schoombie - 051 401 2329
Physical and Chemical Sciences	Dr R.E. Kroon - 051 401 2884
Urban and Regional Planning	Ms G.M. Steenkamp - 051 401 3210

(Departmental Heads / Departmental Chairpersons / Qwaqwa Subject Heads are indicated with an asterisk)

AGRICULTURAL ECONOMICS (051 401 2212)

Professors	Prof. M.F. Viljoen, Prof. L.K. Oosthuizen
Associate Professor	*Prof. A. Jooste, Prof. B.J. Willemse
Professors Extraordinary	Prof. J.A. Groenewald, Dr C.F. le Clus
Senior Lecturer	Mr Z.G. Alemu
Lecturers	Mr B. Grové, Mr A.J. Jordaan, Mr P.R. Taljaard
Agricultural Engineering	
Senior Lecturer	Mr J.J. van Staden
Centre for Agricultural Management	
Head	Dr W.T. Nell
Lecturer	Ms N. Maine

ANIMAL, WILDLIFE AND GRASSLAND SCIENCES (051 401 2211)

Professors	*Prof. J.P.C. Greyling, Prof. G.N. Smit, Prof. H.A. Snyman, Prof. H.J. van der Merwe, Prof. J.B. van Wyk, Prof. F.W.C. Neser
Professors Extraordinary	Prof. A.J. Aucamp, Prof. G.J. Erasmus, Prof. J.P. Hayes, Prof. N.M. Loskutoff, Prof. M.M. Scholtz
Associate Professor	Prof. H.O. de Waal
Senior Lecturer	Dr L.M.J. Schwalbach
Lecturers	Mr M.D. Fair, Ms K.C. Lehloeny, Mr P.J. Malan, Mr F.H. de Witt
Junior Lecturer	Mr O.B. Einkamerer

ARCHITECTURE (051 401 2332)

Professor	Prof. P.G. Raman
Associate Professor	*Prof. J.D. Smit
Senior Lecturer	Ms P. Jooste-Smit
Lecturers	Mr G. Bosman, Mr J.L. du Preez, Mr J.W. Ras, Mr G.P. Swart
Junior Lecturers	Mr H.B. Pretorius, Ms A. van der Merwe

CENTRE FOR CONFOCAL AND ELECTRON MICROSCOPY (051 401 2264)

Associate Professor	Prof. P.W.J. van Wyk
---------------------	----------------------

CENTRE FOR ENVIRONMENTAL MANAGEMENT (051 401 2863)

Director	*Prof. M.T. Seaman
Senior Lecturer	Dr J.C. Roos
Lecturer	Ms M.F. Avenant

CENTRE FOR SUSTAINABLE AGRICULTURE (051 401 2163)

Director	*Prof. I.B. Groenewald
Senior Lecturer	Dr J.C. Roos
Professors Extraordinary	Prof. A.E. Nesamvuni, Prof. A. Pell, Prof. F.J.C. Swanepoel

CHEMISTRY (051 401 2547)

Professors	*Prof. A. Roodt, Prof. J.C. Swarts, Prof. B.C.B. Bezuidenhout
Buitengewone Professor	Prof. H.K.L. Hundt
Associate Professors	Prof. W. Purcell, prof. C.R. Dennis, prof. J.H. van der Westhuizen
Senior Lecturers	Dr H.G. Visser, Dr J. Conradie, Dr G. Steyl, Dr R. Meijboom, Dr A.J. Muller
Lecturers	Dr J.A. Venter, Mr E.H.G. Langner, Dr. K. von Eschwege, Dr S.L. Bonnet, Ms R.F. Shago
Subject coordinators	Dr M. Versteeg, Ms R. Meintjes
Junior Lecturer	Dr T.N. Mtshali
Qwaqwa-kampus	
Professor	*Prof. A.S. Luyt
Senior Lecturer	Vacant
Lecturers	Ms M.A. Mokoena, Ms B.G. Jacobs
Junior Lecturers	Ms D.G. Dikobe, Ms F.N. Stuurman, Mr R.G. Moji, Mr T.A. Tsotetsi

COMPUTER SCIENCE AND INFORMATICS (051 401 2605)

Professors	*Prof. C.J. Tolmie, Prof. P.J. Bignaut, Prof. T. McDonald
Senior Lecturer	Dr. L. de Wet
Lecturers	Mr D. du Plessis, Dr E. Nel, Ms E.H. Dednam, Dr A. van Biljon, Mr A.J. Burger, Mr W. Nel
Junior Lecturers	Mr R.C. Fouché, Mr J. Marais

Qwaqwa Campus

Junior Lecturers

*Mr B. Sebastian, Mr J. Eysele, Ms N.M. John,
Mr F. Mudavanhu, Ms R. Wario, Mr F. Radebe**Vista Campus**

Lecturer

Professor	*Prof. J.J.P. Verster
Senior Lecturer	Dr H.J. Marx
Lecturers	Mr F.H. Berry, Mr B.J. Swart, Mr H.J. van Vuuren, Ms B.J. Kotzé, Mr P.M. Oosthuizen, Mr C. van Zyl

SOIL, CROP AND CLIMATE SCIENCES (051 401 2212)

Professors	*Prof. C.C. du Preez, Prof. J.C. Pretorius, Prof. L.D. van Rensburg, Prof. S. Walker
Senior Lecturers	Dr P.A.L. le Roux, Dr J. Allemann, Dr C.W. van Huyssteen
Lecturers	Ms A. Bothma-Schmidt, Dr G.M. Ceronio, Dr G.M. Engelbrecht , Ms L. de Wet, Ms E. Kotzé
Junior Lecturer	Mr A.S. Steyn

URBAN AND REGIONAL PLANNING (051 401 2486)

Professor	*Prof. J.J. Steyn
Senior Lecturer	Dr M.M. Campbell
Lecturers	Mr P.J. Potgieter, Ms E. Barclay

ZOOLOGY AND ENTOMOLOGY (051 401 2427)

Professors	*Prof. J.G. van As, Prof. O.B. Kok, Prof. S. v.d. M. Louw, Prof. T.C. de K. van der Linde, Prof. L. Basson
Professors Extraordinary	Prof. G.L. Prinsloo, Prof. L.J. Fourie
Senior Lecturer	Dr L.L. van As
Lecturers	Ms E.M.S.P. van Dalen, Mr H.J.B. Butler, Mr C.R. Haddad,
Junior Lecturer	Ms C. Jansen van Rensburg Mr J. Parau
Qwaqwa Campus	
Lecturers	*Dr M. Cunningham, Mr S. Mtshali

POSTGRADUATE PROGRAMMES

Honours Degrees (NQF level 7)

The following Honours Degrees are awarded by the Faculty:

Degree	Abbreviation	Study code
Baccalaureus Scientiae Honores	B.Sc.Hons.	4500
Baccalaureus Scientiae Honores in Home Economics	B.Sc.(Home Ec.)Hons.	4550
Baccalaureus Honores in Spatial Planning	B.Hons.S.P.	4543
Baccalaureus Honores in Soil and Property Development Management (Housing)	B.Hons.S.P.D.M.	4544

INFORMATION

1. The Honours Degree is awarded in the following fields of study:

Actuarial Science, Behavioural Genetics, Biochemistry, Biotechnology, Botany, Chemistry, Clinical Psychology, Computer Information Systems, Construction Management (See Calendar Part 2), Counselling Psychology, Entomology, Food Science, Genetics, Geography, Geohydrology, Geology, Home Economics, Limnology, Mathematics and Applied Mathematics, Mathematical Statistics, Microbiology, Plant Health, Plant Molecular Biology, Psychology, Physics, Soil Science, Statistics, Quantity Surveying (See Calendar Part 2), Wildlife, Zoology.

2. Departments may prescribe additional modules in terms of general regulation A 56(c).
3. Honours students who take more than one year to complete the degree, must register annually according to the regulations of the particular year.
4. **Departmental Prerequisites/Requirements**

A department may set prerequisites/requirements as mentioned below and the final decision regarding the application thereof rests with the Departmental Chairperson.

5. **Module codes**

It should be noted that the numerical part of the module codes for honours modules does not consistently have the same meaning as that of undergraduate modules. The alphabetical part specifies the module name. The number 6 indicates that it is an honours module, while the second and third numbers are simply linked to the particular topic. It should thus be established in consultation with the Departmental Chairperson when the examination for a specific module will take place.

Honours Degree in the subject	Prerequisite/Requirement
Actuarial Science	A candidate must have a B.Sc. or B.Com. degree in Actuarial Science, as well as qualified for at least four exemptions of the subjects of the Faculty / Institute of Actuaries, of which at least one exemption has to be for CT1, CT4 or CT6.
Behavioural Genetics	Genetics and/or Psychology at third year level.
Biochemistry	Biochemistry at third year level.
Biotechnology	Biotechnology or Biochemistry or Microbiology at third year level or else in consultation with the Departmental Chairperson.
Botany	Botany at third year level.
Chemistry	(WTW114 or WTW134) + (WTW124 or WTW144). An average pass mark of 60% in (CEM314 + CEM334 + CEM324 + CEM344).
Computer Information Systems	Computer Information Systems at third year level.
Entomology	Entomology at third year level.
Food Science	Food Science at third year level.
Genetics	Genetics at third year level or an equivalent module.
Geology	Geology at third year level, at least 64 credits. Average 60%.
Geography	Geography at third year level or equivalent Geography III at another university. 64 credits. Average of 60%.
Geohydrology	A degree in Engineering or a B.Sc. or a B.Sc. (Agric.) degree.
Grassland Science	Grassland Science at third year level.
Home Economics	B.Sc. Home Ec., B. Consumer Science or an equivalent qualification.
Limnology	A B.Sc. or B.Sc.Agric. degree with at least one of the following as major: Biochemistry, Chemistry, Zoology, Entomology, Physics, Soil Science, Microbiology, Botany, Mathematics.
Mathematics and Applied Mathematics	Mathematics and Applied Mathematics at third year level or equivalent modules.
Mathematical Statistics	A minimum average pass mark of 60% in (WKS314+WKS324+WKS334+WKS344). Admission is subject to approval by the Departmental Chairperson.
Microbiology	Microbiology at third year level.
Physics	An average pass mark of 60% in (FSK314 + FSK332 + FSK352 + FSK324 + FSK342 + FSK362).
Plant Health	Plant Health or equivalent modules at third year level.
Plant Molecular Biology	Appropriate Botany or equivalent modules at third year level in consultation with the Departmental Chairperson.
Soil Science	Soil Science at third year level.
Statistics	WTW114 and WTW124 as well as a minimum average pass mark of 60% in (STK216+STK226+STK316+STK326). Admission is subject to the approval by the Departmental Chairperson.
Wildlife	Grassland Science at third year level or equivalent modules in consultation with the Departmental Chairperson.
Zoology	Zoology at third year level.

REGULATIONS

Reg. D28 - Admission

- (a) The general regulations in respect of Honours degrees are with the necessary modifications applicable to this Faculty.

- (b) In addition to the provisions of the general regulations in respect of Honours degrees, a student must comply with the particular regulations of the Faculty.
- (c) Students also must apply to the Departmental Chairperson for admission to the Honours degree.
- (d) In addition to the stipulations of the General Regulations (A56(b)) a student must also pass the Agriculture Datametrics modules, DMT214 and DMT224, before receiving the degree in Soil Science and Grassland Science. Students who have applicable modules in Mathematical Statistics may be exempted by the Dean.

Reg. D29 - Presentation

The study material for the Honours degree is presented in the form of either semester modules or year modules.

Semester modules are selected in the following fields of study:

Actuarial Science, Astronomy, Behavioural Genetics, Biochemistry, Biotechnology, Botany, Chemistry, Computer Information Systems, Entomology, Environmental Management, Genetics, Geochemistry, Geography, Geohydrology, Geology, Limnology, Mathematics and Applied Mathematics, Mathematical Statistics, Microbiology, Plant Health, Plant Molecular Biology, Psychology, Physics, Statistics, Zoology.

Year modules are only presented in Home Economics.

Times at which examinations are conducted: See Reg. A63.

Reg. D30 - Curricula

(a) Actuarial Science - Study code 4546

Admission to the Honours degree is subject to approval of the Departmental Chairperson. A candidate must have a B.Sc. or B.Com. degree in Actuarial Science, as well as qualified for at least four exemptions of the subjects of the Faculty / Institute of Actuaries, of which at least one exemption has to be for CT1, CT4 or CT6.

The student needs 120 credits.

Compulsory		Credits
ATW605	- Actuarial Mathematics	20
ATW608	- Mathematics of Finance and Economics	20
ATW693	- Actuarial Modelling and Literature Study	20
WKS603	- Stochastic Processes	20
Another two modules from the following:		
WKS601	- Bayes Analysis	20
WKS602	- Data Mining	20
WKS605	- Advanced Mathematics for Statisticians	20
WKS606	- Multivariate Methods	20
WKS607	- Linear Models	20
WKS609	- Bayes Analysis II	20
WKS611	- <i>Capita Selecta</i>	20

WKS612	-	Stochastic Models for Reliability and Survival Analysis	20
WKS613	-	<i>Capita Selecta</i>	20

Approved topics Mathematics, Applied Mathematics, Economics, Money and Banking and Computer Information Systems may be chosen in consultation with the Departmental Chairperson.

(b) Behavioural Genetics - Study code 4519

This course is presented jointly by Genetics and Psychology for students who majored in these subjects. Students should apply for admittance to the Honours degree in Behavioural Genetics on the prescribed form. These forms should be completed and handed to the Programme director at the beginning of the second semester. Selection will take place during September.

The Honours degree in Behavioural Genetics comprises four compulsory modules (GEN634, GEN693, GGS693 and GGS692) and two modules of choice from the list in consultation with the Programme director.

The modules start on a date determined by the Programme director.

Compulsory modules			Credits
GEN634	-	Behavioural Genetics	16
GEN693	-	Literature study	24
GGS692	-	Research essay	32
GGS693	-	Research: Literature study	24
Modules of Choice			
SIL613	-	Psychopathology	12
SIL614	-	Developmental Psychology	12
GGS693	-	Advanced related specialized course(s) with a similar credit value	12

(bc) Biochemistry - Study code 4511

The curriculum is compiled in consultation with the Departmental Chairperson. The course commences in January or July on a date determined by the Departmental Chairperson.

The Honours degree in Biochemistry consists of modules with a total credit value of 128. In addition to BOC614, BOC622, BOC693 and BOC692 that are compulsory, the student can select BOC654 or any other equivalent (credit value) module in Microbiology, Biotechnology, Genetics, Chemistry or any other discipline, in consultation with the Departmental Chairperson.

Modules			Credits
BOC614	-	Techniques in Biochemistry	16
BOC634	-	Enzymology	16
BOC654	-	Advanced protein structure and function	16
BOC674	-	Advanced molecular biology	16
BOC622	-	Oral examination in theory and practical	8
BOC693	-	Research: Literature study	24
BOC692	-	Research essay	32

(See syllabi for module contents.)

(d) Biotechnology - Study code 4512

The curriculum is compiled in consultation with the Chairperson. Studies commence in January or July on a date determined by the Departmental Chairperson.

The Honours degree in Biotechnology consists of modules with a total credit value of 128. Apart from BTG622, BTG693, BTG692, BTG634 and BTG614/BOC614, which are compulsory, the student must select additional honours modules from the Microbiology, Biotechnology and Biochemistry syllabi. One 16 credit module from any other discipline (e.g. Genetics, Chemistry or Food Science) may be chosen in consultation with the Departmental Chairperson.

Modules		Credits
BTG614	- Techniques in Biotechnology	16
BTG634	- Continuous and batch culture of micro-organisms	16
BTG622	- Oral exam on theory and practical work	8
BTG693	- Research: Literature study	24
BTG692	- Research essay	32
BOC634	- Enzymology	16
BOC654	- Advanced protein structure and function	16
BOC674		
or		
MKB674	- Advanced molecular biology	16
MKB634	- Microbial diversity	16
MKB654	- Applied microbial physiology	16

(For syllabus see under Microbiology.)

(e) Botany - Study code 4530

For the Honours degree in Botany PWS614, PLK692 and PLK693 are compulsory, whereas three other modules of choice have to be selected from the list below, in consultation with the subject head. An examination paper of three hours must be answered in each of the modules of choice. For PLK692 and PLK693 a written report and oral presentation is required. After completion of module PWS614 an oral examination is undertaken.

The course starts on a date as determined by the subject head.

Compulsory modules		Credits
PWS614	- Research techniques	16
PLK693	- Research: Literature study	24
PLK692	- Research essay	32
Modules of Choice:		
PLK614	- Plant ecology	16
PLK624	- Plant physiology I (Metabolism and growth)	16
PLK634	- Algal biotechnology	16
PLK644	- Plant physiology II (Plant defence and applications)	16
PLK654	- Limnobotany	16
PLK664	- Plant diversity and taxonomy of higher plants	16
PLK674	- Micromorphology and ultrastructure	16
PLK684	- Palynology and palaeo-environments	16
XXX000	- Advanced specialized module in the Faculty of Natural and Agricultural Sciences	16
PWS634	- Plant molecular applications	16

(f) Chemistry

After successful completion of the learning programme for the Honours degree. The candidates will be able to provide evidence of the acquisition of sophisticated theoretical subject knowledge as well as understanding and insight of the Chemistry discipline and also the acquisition and development of competencies with respect to experimental procedures and techniques, critical appreciation of literature and independent analysis of information and observed experimental data in support of conclusions and deductions.

1. General requirements

The student must have achieved an average mark of at least 60% for (CEM314 + CEM 334 + CEM324 + CEM 344) to qualify for admission to the Honours degree. The Departmental Management may deviate from the above conditions and grant permission for admission to the Honours degree in exceptional cases. The programme commences in middle January.

2. Curricula

2.1 Chemistry - Study code 4513

Modules		Credits
CEM614	Inorganic Chemistry	16
CEM634	Physical Chemistry	16
CEM654	Organic Chemistry	16
CEM674	Analytical Chemistry	16

Modules		Credits
CEM624	Inorganic Chemistry	16
CEM644	Physical Chemistry	16
CEM664	Organic Chemistry	16
CEM684	Special topics in Inorganic, or Physical or Organic or Analytical Chemistry	16

2.2 Chemistry and Management - Study code 4515

Modules		Credits
CEM614	Inorganic Chemistry	16
CEM634	Physical Chemistry	16
CEM654	Organic Chemistry	16
CEM674	Analytical Chemistry	16

Modules		Credits
OBS623*	Project Management	16
OBS615*	Entrepreneurship	16
OBS611*	Advanced Strategic Management	16
OBS692*	Research essay	32

* Presented by the Faculty of Economic and Management Sciences.

2.4 Explanation

The module contents are compiled in such a way as to facilitate research activities of the department. The learning programme includes topics like reaction kinetics, crystallography, organic

synthesis, computer modeling, thermodynamic applications, industrial processes, catalysis and syntheses applicable to the inorganic, organometallic, biological and medical fields. It also covers aspects from electrochemistry, macromolecular, polymer, bioinorganic, natural product and structural chemistry. Each module has a theoretical and practical component.

Assessment (Per module)

Continuous: (40%) Progress tests, assignments and a practical mark.
 Formal: (60%) A written assessment of 2 hours.

(g) Computer Information Systems - Study code 4532

N.B.: "Information Technology" will be referred to as "IT" hereafter .

The content of the degree may be compiled in two ways, namely:

- (i) Computer Information Systems, **or**
- (ii) IT Management

For both options students must have a total of 120 credits to obtain the Honours degree.

(i) Computer Information Systems

In consultation with the Departmental Chairperson, a research essay (RIS692 - 40 credits) plus **five** modules are decided upon. A maximum of two approved modules offered by other departments may be taken. It is compulsory to commence with the research essay at the start of the Honours degree. In support of the research essay, it may be expected of students to pass an approved module in research methodology. Students are also required to complete at least one student assistantship.

(ii) IT Management

In consultation with the Departmental Chairperson, a research essay (RIS692 - 40 credits) plus **five** modules are decided upon. The **five** modules are compiled from the three categories, IT Management, General IT and General Management, as follows:

- One module from IT Management,
- Two modules from IT and
- Any two approved modules (General Management) offered by the Department of Business Management and/or the Department of Industrial Psychology.

MODULES

The list below depicts the modules offered as well as their relative categories. Please note that all these modules are not necessarily offered every year.

IT Management

Modules		Credits
RIS601	- Network Management	16
RIS610	- Business Expert Systems	16
RIS612	- Management Information Systems	16
RIS613	- Project Management	16
RIS614	- Decision Support Systems	16
RIS625	- Data Warehousing and Mining	16
RIS627	- <i>Capita Selecta</i>	16
RIS628	- <i>Capita Selecta</i>	16
RIS629	- <i>Capita Selecta</i>	16
RIS630	- <i>Capita Selecta</i>	16

General IT			
Modules			Credits
RIS604	-	Security	16
RIS606	-	Theory of Algorithms (prerequisite WTW224)	16
RIS608	-	Artificial Intelligence	16
RIS609	-	Knowledge based systems	16

General Management

Options from Department of Business Management			Credits
OBS634	-	Project Management	16
OBS644	-	International Management	16
OBS654	-	Entrepreneurship	16
OBS664	-	E-Commerce	16
Options from Department of Industrial Psychology			Credits
HUM644	-	Human Resource Management	16
ORG644	-	Organisation Psychology	16

(h) Entomology - Study code 4517

For the Honours degree in Entomology ENT614, ENT622, ENT632, ENT642 and ENT692 are compulsory, whilst, in concurrence with the subject head, three other modules must be chosen from the list below. An examination of three hours must be written in each of the choice modules as well as in ENT632. Continuous assessment and internal examination takes place in ENT614, ENT622 and ENT642 whilst for ENT692 a written report, oral presentation and oral examination is required.

Compulsory modules			Credits
ENT614	-	Research Techniques, Scientific Methodology and Scientific Communication	16
ENT622	-	Quantitative Ecology	8
ENT632	-	Biodiversity (Evolution & Biogeography)	8
ENT642	-	The Environment	8
ENT692	-	Research essay	32
Choice Modules (Select 3)			
ENT654	-	Insect - Plant Interactions	16
ENT664	-	Medical and Veterinary Entomology	16
ENT674	-	Forensic Entomology	16
ENT684	-	Pest Management	16
ENT694	-	<i>Capita selecta</i>	16
XXX000	-	Related module preferably in Faculty of Natural and Agricultural Sciences. Module choice subject to approval and same number of credits	16

(i) Environmental Management - Study code 4528

Environmental Management does not offer an Honours program, but offers two courses each with Zoology (DRK622 and DRK642) and Entomology (ENT622 and ENT642) and the following module, which will be available as an option in other Honours programmes (e.g. Module 694). Presentation of this course depends on the number of applicants and selection by the Director of the Centre for Environmental Management in conjunction with the leader of the particular Honours programme. The course will normally be presented in the first semester.

Optional module		Credits
MOB614	- Water Resource Management	16

(j) Food Science - Study code 4535

Students compile their curriculum in consultation with the Departmental Chairperson, depending on the undergraduate modules completed. The Honours degree in Food Science consists of modules with a total credit value of 128. Two modules, **VWS692** and **VWS601** or **VWS602** are compulsory. The student must select a further 64 credits from modules in Food Science or any other discipline in consultation with the Departmental Chairperson.

Module		Credits
VWS601	- Food Microbiology	32
VWS602	- Food Chemistry	32
VWS603	- Dairy Science	32
VWS604	- Meat Science	32
VWS605	- Foods	32
VWS607	- Additional Food Science topics	32
VWS692	- Seminar and laboratory project	32

(k) Genetics - Study code 4520

Students should apply for admission to the Honours degree in Genetics on the prescribed form. These forms should be completed and handed to the subject head at the beginning of the second semester. Selection will take place at the end of August.

The Honours degree in Genetics includes three compulsory modules, GEN684, GEN693 and GEN692 and three modules of choice selected in consultation with the subject head from the list below. All modules of choice have 3 hour examination papers. A written scientific paper and an oral presentation is required for GEN692 and GEN693. GEN684 will be evaluated internally and continuously.

The courses start on a date determined by the subject head.

Compulsory modules		Credits
GEN684	- Research Techniques	16
GEN693	- Research: Literature study	24
GEN692	- Research essay	32
Modules of choice		
GEN614	- Advanced cytogenetics	16
GEN624	- Plant improvement	16
GEN634	- Behavioral Genetics	16
GEN644	- Advanced molecular systematics	16
GEN654	- Molecular ecology	16

GEN664	-	Forensic DNA typing	16
GEN674	-	<i>Capita Selecta</i> Genetics	16
MBG604	-	Diagnostic molecular biology	16
PWS674	-	Plant transformation	16
XXX000	-	Advanced related specialized course(s) in the Faculty of Natural and Agricultural Sciences with a similar number of credits	16

(l) Geography - Study code 4521

A student must achieve an average pass mark of 60% for all Geography modules (64 credits) at third year level to be admitted to the Honours degree. In exceptional cases the department may grant admission by virtue of an oral or written evaluation in which the student displays up-to-date knowledge of the theory and principles of the subject. Depending on a student's academic background additional modules may be prescribed by the department. Proof of computer literacy is a prerequisite for GIS616 and GGF656 or GGF666. A student's skills in English will be assessed. If the student does not meet the required standard, additional modules (ENG104 or ENG108) will be prescribed. For admission to the examination, a semester mark or year mark of at least 50% is required for each module.

CURRICULUM

GEO616 and GEO692 are compulsory. Three modules (72 credits) from the rest with due consideration of requirements:

		Credits	
GEO616	-	Theoretical foundations of geography	24
GEO692	-	Research essay	32
GGH626	-	Advanced tourism studies (Qwaqwa)	24
GGH636/646	-	Urban geography	24
GGH676/686	-	Tourism and Recreation geography	24
GGF616/626	-	Environmental geography	24
GGF636/646	-	Applied geomorphology	24
GIS616	-	Geographical Information Systems (Advanced)	24
GIS626	-	Geographical Information Systems (Intermediate)	24
GIS646	-	Spatial analysis and modelling	24
GGF656/666	-	Remote sensing and Image processing	24
GEO606	-	<i>Capita Selecta</i> in Geography	24
XXXXYY6	-	An examination paper in a relevant field of study, for which admission has been granted. (Use the applicable course code)	24

(For transitional regulations see Annexure B)

(m) Geohydrology - Study code 4524

The student compiles his/her curriculum in consultation with the Departmental Chairperson. The curriculum shall consist of at least six semester modules (120 credits). Additional modules of other departments may be prescribed.

Modules			Credits
GHR611	-	Groundwater hydraulics	20
GHR612	-	Hydrochemistry and pollution	20
GHR613	-	Groundwater geophysics	20

GHR621	-	Groundwater modelling	20
GHR622	-	Groundwater management	20
GHR623	-	Case study	20

(n) Geology - Study code 4522

For admission to the Honours degree in Geology a student must achieve a combined average pass mark of 60% in four Geology modules (64 credits) at third year level. If not, the student may be allowed to complete the Honours degree over a period of two years.

Examination papers of three hours each are written in all modules except GLG693 where examination will be by an internal as well as an external examiner. Students compile their own curricula in consultation with the programme manager to acquire 60 credits for a pass mark at the end of the semester. GLG616 and GLG626 are compulsory core modules for students following the Geology Programme. GLG636 and GLG673 are compulsory for students taking the Environmental Geology Programme, while GLG636, GLG626, OBS63 4, OBS654, OBS674 and OBS691 compulsory modules are for the Programme in Geology and Management. For students in the Geochemistry programme it is compulsory to take GLG616, GLG636, GLG673, GLG626, GLG646 and GLG663. Modules marked by an asterisk (*) contain a research component. To obtain admission to the examination in these modules a student must acquire a semester mark of at least 50% in the research part of the module. The research component of the modules are as follows: GLG693 amount to 24 credits (100%); GLG626, GLG636, GLG646 and GLG656 each amount to 12 credits (50%); GLG616 amount to 6 credits (25%) and the other electives each 2,4 credits (20%). The study starts either in January or July on a date as determined by the Department.

First semester

Modules			Credits
GLG616*	-	Plate Tectonics	24
GLG636*	-	Mineralogy	24
GLG653*	-	Igneous Geology	12
GLG656*	-	Structural Geology	24
GLG673*	-	Environmental Geochemistry	12

Second semester

Modules			Credits
GLG626*	-	Economic Geology	24
GLG623*	-	Sedimentology	12
GLG643*	-	Metamorphic Geology	12
GLG646*	-	Advanced Geochemistry	24
GLG663*	-	Mineral Exploration	12
GLG683*	-	Capita Selecta	12
GLG693*	-	Short research essay	24

Electives

**OGR424	-	Environmental- and Mining Law and policy	16
***OBS611	-	Advanced strategic management	16
***OBS615	-	Entrepreneurship	16
***OBS692	-	Mini dissertation	16
***OBS623	-	Project management	16

** Presented by the Faculty of Law.

*** Presented by the Faculty of Economic and Management Sciences.

(o) Grassland Science - Study code 4536

Four examination papers of three hours each, two in the first semester and two in the second semester as well as a seminar and an assignment/project in WDK693 is required.

Modules		Credits
WDK601	- Rangeland physiology and ecology	24
WDK602	- Rangeland management	24
(WDK603	- Intensive pasture production or	24
WDK605)	- Wildlife management	24
WDK604	- Rangeland evaluation	24
WDK693	- Seminars and short research essay	24

Any one of the above-mentioned modules can be replaced by an appropriate honours module from another field, in consultation with the Departmental Chairperson.

(p) Home Economics - Study code 4550

Three modules of 32 credits each and a research project (also 32 credits) selected in consultation with the Departmental Chairperson. A year mark of at least 50% is required for B.Sc.(Home Econ.) Hons.

Modules		Credits
HDK602	- Clothing industry	32
HDK603	- Social aspects of clothing	32
HDK604	- Textiles (fibres)	32
HDK605	- Textiles (construction and finishes)	32
HDK606	- Textile history	32
VBW601	- Foods Consumer analysis	32
VDG601	- Nutrition	32
VWS605	- Foods	24
VWS606	- Cereal and Vegetable science	24
VWS607	- Advanced Foods	24
HDK692	- Research essay	32

(q) Limnology - Study code 4525

Limnology (the study and science of inland waters) is an interdisciplinary field of study that is presented at a postgraduate level by different departments under control of the Limnology Committee, which consists out of:

Dean

Programme Director

Two additional members and the committee has the right to co-option.

The study commences in January on a date as determined by the Programme Director. Admission to the programme depends on the Limnology Committee and applications must be submitted before November of the next year of study. Students must obtain a minimum of 120 credits to pass the course. The composition of the modules must be done in consultation with the Programme Director.

Compulsory modules			Credits
PWS614	-	Research techniques	16
LIM693	-	Research: Literature study	16
LIM692	-	Research essay	32
PLK654	-	Limnobotany	16
DRK674	-	Aquatic Parasitology	16
Choice modules			Credits
MOB614	-	Water Resource Management	16
DRK622	-	Quantitative Ecology	8
DRK642	-	The Environment	8
GIS616	-	Geographical Information Systems (Intermediate)	24
PLK614	-	Plant ecology	16
XXX000	-	Advanced specialized module with a credit value of	16

(r) Mathematics and Applied Mathematics - Study code 4537

For admission to an Honours degree in Mathematics or Applied Mathematics a student needs third year Mathematics or Applied Mathematics, or their equivalents. **Students may be required to take additional undergraduate courses if their background need strengthening.** The Chairperson of the Department grants admission. The Honours degree requires a total credit value of at least 120, and consists of six elective modules from the following list and the two compulsory modules. Short Research Essay and Mathematics Generic Skills. The curriculum is compiled in consultation with the Departmental Chairperson. Appropriate modules from other disciplines may also be included.

Module	2006 Code	2007 Code	Credits
Algebra	WTW604	WTW601	16
Galois theory	WTW614	WTW602	16
Topology	WTW624	WTW603	16
Modern topology	WTW634	WTW604	16
Functional analysis	WTW644	WTW605	16
Measure and integration theory	WTW654	WTW606	16
Coding theory	WTW664	WTW607	16
Discrete Mathematics	WTW674	WTW608	16
Set theory	WTW684	WTW609	16
Group theory	WTW694	WTW610	16
Ring theory	WTX604	WTW611	16
Category theory	WTX614	WTW612	16
Methods of Mathematics	WTX624	WTW613	16
Digital image processing	WTX634	WTW614	16
Numerical linear algebra	WTX644	WTW615	16
Numerical solution of differential equations	WTX654	WTW616	16
Optimisation	WTX664	WTW617	16
Cryptography	WTX674	WTW618	16
Partial differential equations	WTX684	WTW619	16
Fluid mechanics	WTX694	WTW620	16
Biological modeling	WTY614	WTW621	16
Fractional Calculus	WTY624	WTW622	16
Financial Mathematics	WTY644	WTW623	16
Graph Theory	WTY684	WTW624	16

<i>Capita Selecta</i>	WTY664	WTW644	16
<i>Capita Selecta</i>	WTY674	WTW645	16
<i>Capita Selecta</i>		WTW646	16
Mathematics Generic Skills		WTW651	16
Short Research essay	WTW692	WTW693	16

With the approval of the Departmental Chairperson continuous evaluation may be used in certain modules. A student passes only if each assignment is completed satisfactorily and a final mark of at least 50% obtained.

The final mark for any module other than the mini dissertation and continuous evaluation, is the end-of-semester examination mark, or a combination of this mark with the marks of assignments and other evaluations. To pass any module the student must obtain at least 50% in the examination and 50% for the combined final mark, when applicable.

(s) Mathematical Statistics - Study code 4538

A minimum average pass mark of 60% in (WKS314+WKS324+WKS334 +WKS344) is required. Admission is subject to approval by the departmental chairperson.

The student needs 120 credits.

Modules		Credits
WKS601	- Bayes Analysis	20
WKS602	- Data Mining	20
WKS603	- Stochastic Processes	20
WKS605	- Advanced Mathematics for Statisticians	20
WKS606	- Multivariate Methods	20
WKS607	- Linear Models	20
WKS608	- Categorical Data Analysis	20
WKS609	- Bayes Analysis II	20
WKS610	- Time Series Analysis	20
WKS611	- <i>Capita Selecta</i>	20
WKS612	- Stochastic Models for Reliability and Survival Analysis	20
WKS613	- <i>Capita Selecta</i>	20
WKS620	- Stochastic Simulation	20

Students are strongly advised to choose approved modules from other disciplines in consultation with the Departmental Chairperson. In addition to a minimum of 80 credits chosen from the above modules, students can choose the remaining modules from Mathematics, Applied Mathematics, Economics, Money and Banking, or Computer Information Systems. Basic computer literacy is a strong recommendation.

(t) Microbiology - Study code 4526

The curriculum is compiled in consultation with the Departmental Chairperson at the Department of Microbial, Biochemical and Food Biotechnology. Studies commence in January or July at a date determined by the Departmental Chairperson.

Honours in Microbiology consists of modules with a total credit value of 128. Apart from MKB614, MKB622, MKB692 and MKB693, which are compulsory, the student must select additional honours modules from the Microbiology and Biotechnology Honours syllabi. One 16 credit Honours module

from any other discipline (e.g. Biochemistry, Genetics, Chemistry or Food Science) may also be chosen in consultation with the Departmental Chairperson.

Modules		Credits
MKB614	- Techniques in Microbiology	16
MKB634	- Microbial diversity	16
MKB654	- Applied microbial physiology	16
MKB674	- Advanced molecular biology	16
MKB622	- Oral exam on theory and practical work	8
MKB693	- Research: Literature study	24
MKB692	- Research essay	32

(u) Physics - Study Code 4518

A student must have achieved an average mark of at least 60% in (FSK314 + FSK332 + FSK352 + FSK324 + FSK342 + FSK362) to qualify for admission to the Honours degree. The Departmental Chairperson may grant permission for admission to the Honours degree in exceptional cases. The programme commences in middle January and students must apply for admission with the Departmental Chairperson before that date.

The curriculum is composed in consultation with the Departmental Chairperson from the modules listed below. The complete curriculum must consist of at least eight modules, plus the practical module FSK692 which is compulsory. Each module must be independently passed.

The degree can be offered over more than one year. Postgraduate modules from other subject disciplines can also be offered in consultation with the Departmental Chairperson.

Modules		Credits
FSK601	- Quantum Mechanics*	16
FSK602	- Solid State Physics I*	16
FSK603	- Research Techniques*	16
FSK604	- Mathematical Methods of Physics	16
FSK605	- Solid State Physics II*	16
FSK606	- Semi-conductors*	16
FSK607	- Statistical Physics	16
FSK608	- Electrodynamics	16
FSK609	- Materials Science I*	16
FSK610	- Materials Science II*	16
FSK611	- Electronics*	16
FSK612	- Astrophysics	16
FSK613	- <i>Capita Selecta I</i>	16
FSK614	- <i>Capita Selecta II</i>	16
FSK692	- Research essay*	32

Not all these topics are necessarily offered in a given year.

* Students wanting to do an M.Sc. in surface physics are strongly recommended to register for these courses.

(v) Plant Health - Study Code 4529

For the honours course in Plant Health PPG692, PPG693 and PWS614 are compulsory, whereas three other modules have to be selected, in consultation with the division head, from PPG614, ENT654, PLK654 and PLK664. An examination paper of three hours must be answered in each of those selected from the latter modules. After completion of module PWS614 an oral examination is undertaken. Continuous assessment takes place in PPG696 and a project report is required for PPG692.

Compulsory modules		Credits
PWS614	- Research techniques	16
PPG693	- Research: Literature study	24
PPG692	- Research essay	32
Modules of choice		
PLK614	- Plant ecology	16
PLK664	- Plant diversity and taxonomy of higher plants	16
PPG614	- Ecology and biology of disease organisms	16
ENT654	- Insect-plant interactions	16

One of the above-mentioned elective modules may be replaced by a suitable honours module from another field, in consultation with the division head.

(w) Plant Molecular Biology - Study code 4531

For the Honours degree in Plant Molecular Biology PWS614, PLK692 and PLK693 are compulsory, whereas three other modules have to be selected from the list below, in consultation with the subject head. An examination paper of three hours must be written in each of the modules of choice. For PLK692 and PLK693 a written report and oral presentation is required. After completion of PWS614 an oral examination is undertaken.

The course commences on a date as determined by the subject head.

Compulsory modules		Credits
PWS614	- Research techniques	16
PLK693	- Research: Literature study	24
PLK692	- Research essay	32
Modules of choice		
PLK624	- Plant physiology I (Metabolism and growth)	16
PLK634	- Algal biotechnology	16
PLK644	- Plant physiology II (Plant defence and applications)	16
PWS634	- Plant molecular applications	16
PWS674	- Plant transformation	16
XXX000	- Advanced specialized module in the Faculty of Natural and Agricultural Sciences with the same credit value	16

(x) Psychology - Study Code 4533

Prospective students for the Honours degree in Psychology must apply for selection to the course before registering. Successful students will receive written confirmation from the Head of the Departmental Chairperson.

Application forms are available on request from the Department of Psychology, UFS.

For detailed information, see the Calendar of the Faculty of Humanities.

(y) Soil Science - Study Code 4523

An examination of three hours is written in each of GKD601, GKD602, GKD603 and GKD604. Reports on the practical assignments in these four courses and two seminars on suitable topics are required in GKD693.

Modules		Credits
GKD601	- Soil chemical principles and applications	24
GKD602	- Soil physical principles and applications	24
GKD603	- Soil genesis and evaluation	24
GKD604	- Soil fertility and fertilization	24
GKD693	- Research: Practical reports and seminars	24

Any one of the above-mentioned modules can be replaced by an appropriate under- or postgraduate module from another discipline, in consultation with the Departmental Chairperson.

(z) Statistics - Study code 4534

WTW114 and WTW124 as well as a minimum average pass mark of 60% in (STK216+STK226+STK316+STK326) are required. Admission is subject to the approval by the departmental chairperson.

The student needs 120 credits.

Modules		Credits
STK601	- Operational Research	20
STK602	- Advanced Mathematics for Statisticians	20
STK603	- Econometrics	20
STK604	- Non-parametric Methods	20
STK605	- Decision Theory	20
STK606	- Regression Analysis	20
STK607	- Contingency Tables	20
STK608	- Quantitative Forecasting	20
STK609	- Multivariate Analysis	20
STK610	- <i>Capita Selecta</i>	20
STK611	- Data Mining	20
STK613	- <i>Capita Selecta</i>	20
STK620	- Stochastic Simulation	20

Students are strongly advised to choose approved modules from other disciplines in consultation with the Departmental Chairperson. In addition to a minimum of 80 credits chosen from the above modules, students can choose the remaining modules from Mathematics, Applied Mathematics, Economics, Money and Banking, or Computer Information Systems. Basic computer literacy is a strong recommendation.

(aa) Wildlife - Study code 4527

Four examination papers of three hours each are written, two in the first and two in the second semester, and an assignment/project in NLE692 is required.

Compulsory modules	Credits
---------------------------	----------------

NLE601	-	Habitat preferences and diet selection of game	24
NLE602	-	Habitat evaluation and monitoring	24
NLE603	-	Integrated planning and practical environmental management practices	24
NLE692	-	Research essay	32

Choose one of the following:

DRK664	-	Animal behaviour	16
or			
ENT694	-	<i>Capita Selecta</i>	16

Any one of the above-mentioned modules can be replaced by an appropriate Honours module from another field of study, in consultation with the Departmental Chairperson.

(bb) Zoology - Study code 4516

For the Honours degree in Zoology DRK614, DRK622, DRK632, DRK642 and DRK692 are compulsory, whilst, in concurrence with the discipline head, three other modules must be chosen from the list below. An examination of three hours is written in DRK632. DRK614, DRK622 and DRK642 will be continuously evaluated and an internal examination will be written, whilst for DRK692 a written report, oral presentation and oral examination is required.

Compulsory modules			Credits
DRK614	-	Research Techniques, Scientific Methodology and Scientific Communication	16
DRK622	-	Quantitative Ecology	8
DRK632	-	Biodiversity (Evolution and Biogeography)	8
DRK642	-	The Environment	8
DRK692	-	Research essay	32
Choice Modules (Select 3)			
DRK654	-	Veterinary Ectoparasitology	16
DRK664	-	Animal Behavior / Veterinary Endoparasitology	16
DRK674	-	Aquatic Parasitology / Wetland ecology	16
DRK684	-	African Ornithology / Immunology	16
DRK694	-	<i>Capita selecta</i>	16
XXX000	-	Related module preferably in Faculty of Natural and Agricultural Sciences. Module choice subject to approval and same number of credits	16

Programmes in Urban and Regional Planning: Residential and Compact Learning

The 12/18 months full time/part time programme results in the obtaining of a Bachelors Honours degree in Spatial Planning

Reg. D54 - Entrance requirements

- (a) A person may be admitted to the aforementioned program in Spatial Planning if he/she is in possession of one of the following qualifications and has the necessary academic background:
 - (i) A Bachelor's degree in Urban and Regional Planning.
 - (ii) A Bachelor's degree in commerce, administration or law.
 - (iii) A Bachelor's degree in Architecture, Civil Engineering, Land surveying, Quantity surveying, Construction management, Land- and property development management.
 - (iv) A degree with one of the following majors: Agricultural economics, Anthropology, Applied Mathematics, Botany, Business Management, Computer Information Systems, Economy, Environmental Science, Forestry, Geology, Geography, Mathematical Statistics, Psychology, Public Administration, Sociology or Statistics.
- (b) If a student does not entirely meet the admission requirements, the Dean may, in consultation with the Head of the Department, in meritorious cases, recommend that some concessions be made in respect of the requirements, with the final decision resting with the Executive Committee of the Senate. Supplementary courses may be required as determined by the Head of the Department or a student may be expected to do an extra year to complete the programme.
- (c) A person in possession of one of the above-mentioned qualifications will not automatically be accepted for the programme. Selection takes place and the Head of the Department could require a written motivation or personal interview.
- (d) Language skills in language medium that students want to do the programme (English or Afrikaans) will be tested. An acceptable module in the use of language (for example ENG 104) as determined by the Head of the Department, will have to be taken and passed at the students' own cost should he/she not comply with the required standard.
- (e) A test for computer literacy will be conducted. If the student does not comply with the standard as determined by the Head of the Department, he/she has to take and pass a computer skills module at the students own cost.

Reg. D55 - Duration, organization and outcome of the program

A minimum study period of one year is required to obtain the Honours in Spatial Planning. The Head of the Department determines how the modules must be distributed over the years of study and in all programmes (Full time, Part time and Compact Learning) the modules may be spread over an extra year if a student does not have the necessary academic background.

The B HONS SP programme can also be done through block modules (compact learning). For compact learning students four workshop weeks per year for the duration of the program are compulsory and that will be determined by the Head of Department. These workshops must be attended at the department. During these workshop lectures, tutorials, practicals and discussions will take place. Assignments, tests and examinations will also be done.

After completing the B HONS SP programme, the graduates will possess the following skills:

- A thorough knowledge of the nature and goal of Urban and Regional Planning as well as Planning Theory, Philosophy and Ethics.
- The capacity to complete practical urban and regional planning projects including township layouts and township establishment, the completion and management of different types of plans and urban development management.
- The capacity to write reports in a logical and comprehensible way, to orally communicate recommendations to all the stakeholders and to apply professional planning decisions in practice.

Reg. D56 - Curriculum

(a) Regular curriculum

The composition of the student's curriculum and optional courses will be determined at the beginning of each year in consultation with the Head of the Department.

For the B HONS SP programme, students must, in addition to the compulsory 96 credits of the major modules, take semester modules to a minimum of 48 credits as determined by the Head of the Department according to their needs and background with a minimum of 144 credits.

Major (Fundamental and Core) Modules (80 credits)

	MODULES	
	Year	
	Semester 1	Semester 2
Theory of URBAN PLANNING (16 credits)	BTR604 : Theory of Urban Planning Component 1 : General lecturers , seminars, assignments, etc.	
Practice of URBAN PLANNING	BSP612 : Basic Practice of Urban Planning Component 1 : General lecturers, seminars, assignments, etc	GSP612 : Advanced Practice of Urban Planning Component 1 : General lecturers, seminars, assignments, etc.
	BCP612 : Basic computer use for Planners. Component 1: Use of CAD and GIS. General lecturers, seminars, assignments, etc Component 2: Practical application relative to each urban developmental project	GCP612 : Advanced Computer use for Planners Component 1: General lecturers, seminars, assignments, etc Component 2: Practical application relative to each urban developmental project
Theory of REGIONAL PLANNING (32 credits)	BRT614 : Basic theory of Regional Planning Component 1 : General lecturers, seminars, assignments, etc.	ATS624 : Advanced theory of Regional Planning Component 1 : General lecturers, seminars, assignments, etc.

Further Core learning (research) (16 credits)

Methodology (16 credits)	BMK612 : Planning Methodology General lecturers, seminars, assignments, etc.	BNA622 : Planning research Writing of a research proposal.
-------------------------------------	---	--

Elective Modules (In conjunction with the Head of the Department) (48 credits)

Three of the following subjects must be selected:

Compulsory (48 credits)	BET614/624 (Ethics); BGO614/624 (Environmental); EVB614/624 (Economics); CSB614/624 (Capita Selecta)
------------------------------------	---

(b) Exit curriculum

Students that passed 144 credits (80 credits in major modules and 64 credits in compulsory and optional modules) in the Master in Urban and Regional Planning (programme 4760) can exit with a B Hons of Spatial Planning.

Reg. D57 - Transitional Regulations

All students who registered before 2005 will follow the programme set out in previous calendars.

Reg. D58 - Pass requirements

In addition to the requirements as set out in the general regulations, the following shall also apply.

Examination

- (i) For all the modules, a joint examination mark is calculated from a year/semester mark and an examination mark.
- (ii) For all modules presented by the Department of Urban and Regional Planning, the final examination will be conducted orally and no second examination opportunity will be offered, except in cases where the Head of the Department decides otherwise.
- (iii) For major modules such as BSP712/GSP722, BCP712/GCP722, BRT614/ATS624 and BMK612/BNA622 which are coupled, it is required that both modules, BSP712 and BCP712, must be passed in the first semester to be able to continue in the second semester with GSP722 and GCP722.
- (iv) For elective modules, as determined by the Head of the Department, a student can be promoted with a semester mark of 65% and thus be exempted from examination in those modules
- (v) The degree is awarded to a student who obtains a minimum of 144 credits in the programme.
- (vi) The degree is awarded with distinction to a student who obtained an average of 75% in BRT714, ATS724, BSP712, BCP712, GSP722, GCP712 and BTR604 in the prescribed minimum study years.

INFORMATION

The purpose of this qualification, which forms part of the broader land and property development management programme, is to equip students with the necessary knowledge, skills and values to make a substantial contribution to the improvement of the housing environment in Southern Africa. Although much has already been achieved, more needs to be done in order to improve the lives of citizens via managed settlements.

The qualified student will demonstrate knowledge of methodology of housing research in order to conduct appropriate research, and under supervision, assist in providing professional services in housing administration, facilitation and housing management in the housing and human settlement environment.

REGULATIONS

Reg. D59 - Entrance requirements

- a. The qualification recognises formal and non-formal prior learning (incorporating experiential learning) at NQF level 6 (360 credits). In some cases, additional course work (credits) may be a prerequisite. In accordance with the provisions of the general regulations, students who wish to register for the Bachelor of Land and Property Development Management (Housing) Honours must submit proof that they have obtained a degree at NQF level 6 (360 credits) in one of the following qualifications:
 - (i) A degree in Urban and Regional Planning or Development Studies.
 - (ii) A Bachelor's degree in Commerce, Administration or Law.
 - (iii) A Bachelor's degree in Architecture, Civil Engineering, Land Surveying, Quantity Surveying, Construction Management, Land- and Property Development Management or Land Valuation.
 - (iv) A degree with one of the following majors: Agricultural Economics, Anthropology, Consumer Science, Home Economics, Botany, Business Management, Computer Information Systems, Economy, Environmental Science, Forestry, Geology, Geography, Mathematical Science, Psychology, Public Administration, Sociology or Statistics, Nursing.
- b. If a student does not meet the admission requirements, the Dean may, in consultation with the Head of the Department, in meritorious cases, recommend that some concessions be made in respect of the requirements. The final decision rests with the Executive Committee of the Senate. Supplementary courses may be required as determined by the Head of the Department.
- c. A person in possession of one of the above-mentioned qualifications will not automatically be accepted for the course. Selection takes place and the Head of the Department may require a written motivation or personal interview.
- d. Language skills will be tested in the language medium (English or Afrikaans) in which students wish to do the programme. An acceptable module in the use of language (for example ENG 104) as determined by the Head of the Department will have to be taken and passed at the student's own cost should he/she not comply with the required standard.

- e. A test for computer literacy will be conducted. If the student does not comply with the standard as determined by the Head of the Department, he/she has to take and pass a computer skills module at the student's own cost.

Reg. D60 - Duration, organisation and outcome of the programme

A minimum study period of one year is required in order to obtain the Bachelor of Land and Property Development Management (housing) Honours. The Head of the Department determines how the modules must be distributed over the years of study. In all programmes (full-time, part-time and compact learning) the modules may be spread over an extra year if a student does not have the necessary academic background.

The Bachelor of Land and Property Development Management (Housing) Honours programme can also be taken in block modules (compact learning). Students who do the compact learning programme must attend four workshop weeks per year for the duration of the programme as determined by the Head of the Department. These workshops must be attended at the Department. These workshops consist of lectures, tutorials, practicals and discussions. Students will also have to complete assignments as well as write tests and examinations.

Upon completing the Bachelor of Land and Property Development Management (Housing) Honours, graduates will possess the following skills:

- The qualifying student demonstrates in-depth knowledge appropriate to the discipline, and critical, analytical thinking to appreciate research, interpret, refine and modify existing knowledge of housing in human settlements.
- The qualifying student demonstrates knowledge of housing in human settlements research methods, skills in research appropriate to a specific context, and the ability to integrate architectural research and design.
- The qualifying student has experience of group work with peers.

Reg. D61 - Curriculum

Subjects are selected in consultation with the Head of the Department to supplement gaps in the student's background and experience. The total credit value of the qualification/programme is 128 credits. The programme is divided as follows:

Fundamental Learning (24 credits)

Methodology and Research (8) (BMK 602)

- Introduction to housing and human settlements: a theoretical perspective (16) (HSI 604)

Core Learning (64 credits)

Select four modules (4 x 16 credits) from the major courses.

- Urban and regional planning principles in housing (16) (BEH 604)
- Housing administration (legislation) (16) (HAL 604)
- Urban geography of housing and human settlements (16) (GBE 604)
- Property economics in housing property development (16) (END 604)
- Development studies (16) (DES 604)
- Project management (16) (TRB 604)

Elective Learning (40 credits)

Select a further 40 credits from either major (indicated by •) or supplementary (indicated by ♦) courses when offered.

- ♦ Principles of housing construction and economics (8) (PHC 602)
- ♦ Evaluation and property management (8) (ENW 602)
- ♦ Facilitation and housing management (8) (FHM 602)
- ♦ Sustainable housing and human settlement in dry rural areas (8) (BGO602)
- ♦ Anthropology of human settlements (8) (AHS 602)
- ♦ Sociology and housing (8) (SOB 602)
- ♦ Capita Selecta (8) (CSB 602)
- ♦ Writing research protocols (8) (RSP 602)

TOTAL: 128 Credits

Reg. D62 - Pass requirements

- (i) For all the modules, a joint examination mark is calculated from a year/semester mark and an examination mark.
- (ii) For all modules presented by the Department of Urban and Regional Planning, the final examination will be conducted orally and no second examination opportunity will be offered, except in cases where the Head of the Department decides otherwise.
- (iii) For elective modules, as determined by the Head of the Department, a student can be promoted with a semester mark of 65% and thus be exempted from examination in those modules.
- (iv) The degree is awarded to a student who obtains a minimum of 128 credits in the programme.
- (v) The degree is awarded with distinction to a student, who obtains an average of 75% in SI614, BEH 614 / 624, HAL 614/ 624, GBE 614/ 624, END 604, DES 614/ 624 and TRB 604 in the prescribed minimum study years.

Master's degrees

Degree	Abbreviation	Study code
(i) Magister Scientiae	M.Sc.	4700
(ii) Magister in Mineral Resource Management	MRM	4709
(iii) *Magister Architecturae	M.Arch.	4710
(iv) *Magister Scientiae(Quantity Surveying)	M.Sc.(Q.S.)	4720
(v) Magister Scientiae(Clinical Psychology)	M.Sc.(Clinical Psychology)	4740
(vi) Magister Scientiae (Counselling Psychology)	M.Sc.(Counselling Psychology)	4750
(vii) Magister (Urban and Regional Planning)	M.U.R.P.	4760
(viii) Magister (Spatial Planning)	M.S.P.	XXX
(ix) Magister Scientiae in Home Economics	M.Sc.(Home Ec.)	4770
(x) * Magister Scientiae (Construction Management)	M.Sc.(Construction Management)	4780
(xi) Magister in Environmental Management	M.E.M.	4790
(xii) *Magister in Property Science	M.PROP.	4791

* For information see Calendar Part 2.

MAGISTER SCIENTIAE **Study code 4700**

M.Sc.

INFORMATION

The Master of Science degree is awarded in the following fields of study:

Applied Mathematics, Astronomy, Behavioural Genetics, Biochemistry, Biotechnology, Botany, Chemistry, Clinical Psychology, Computer Information Systems, Counseling Psychology, Entomology, Food Science, Genetics, Geography, Geohydrology, Geology, Grassland Science, Limnology, Mathematical Statistics, Mathematics, Microbiology, Mineral Resource Management (MRM), Physics, Plant Molecular Biology, Plant Pathology, Psychology, Soil Science, Statistics, Wildlife, Zoology.

- Students who enrol for the Master's degree by dissertation, register under the code 4792.
- Students who enrol for the one year structured Master's degree, register under the code 4793.
- Students who enrol for the two year structured Master's degree, register under the code 4794.

Module codes

In cases where an M.Sc. degree consists only of a dissertation (at least 120 credits), the alphabetical part which refers to the module code is followed by the number 700.

In cases where the M.Sc. degree consists of both course work and research related assignments the alphabetical part refers to the module name and the number 7 to the fact that it is a Master level module. It must be noted that the second and third numbers do not always have the same meaning as that of undergraduate modules.

REGULATIONS

Reg. D31 - Admission

- (a) Candidates have to apply to the Departmental Chairperson for admission to Master's degree studies.
- (b) The general regulations of the University in respect of Master's degrees apply with appropriate modification to this Faculty.
- (c) In addition to the provisions of the general regulations for Master's degrees, a candidate must comply with the regulations of this Faculty.
- (d) In consultation with the supervisor and on the recommendation of the supervisor(s), the Departmental Chairperson and the Research Committee of the Faculty, a candidate who has been admitted for the Master's degree in terms of Reg. A80 may, after a study and registration period of at least one year, apply to be allowed to continue his/her studies at the Ph.D. degree level. Following admission to the Ph.D. degree, at least two years must elapse before the Ph.D. degree can be conferred. The period of study for the degree will therefore be at least three years.

The M.Sc. degree may be conferred upon a candidate if:

- (i) the candidate withdraws his candidature for the Ph.D. degree, or
- (ii) his candidature for the Ph.D. degree is cancelled, or
- (iii) the candidate does not meet the requirements for the Doctor's degree.

Reg. D32 - Pass requirements

(a) Pass requirements

In addition to the general regulations, the following also applies:

The Departmental Chairperson will, in respect of each candidate, submit to the Administration the marks obtained for the examination papers as required, as well as a statement that the candidate has met all the departmental provisions. The conferment of the Master's degree will be subject to this.

(b) Relative weight per question paper

The examination papers and dissertation carry relatively the same weight, unless otherwise stated by the Departmental Chairperson.

Reg. D33 - Requirement(s)

In the following fields of study, namely Biochemistry, Biotechnology, Botany, Chemistry, Entomology, Genetics, Geology, Grassland Science, Limnology, Microbiology, Plant Molecular Biology, Plant Pathology, Psychology,* Soil Science, Wildlife and Zoology, a dissertation is required.

A candidate must do research on an approved topic for at least two semesters, in consultation with the Departmental Chairperson, in preparation for a dissertation that shall be submitted as the only requirement for the degree.

The candidate will present at least one seminar/research report in each year in accordance with departmental regulations.

* For full details consult Calendar, Faculty of Humanities.

(a) Chemistry - Study code 4792

After successful completion of the learning programme for the Master's degree the candidate will be able to provide evidence of advanced study and research characterised by intellectual independence and advanced knowledge of a specialisation area in the subject, as well as accurate evaluation of his/her own results and as well as that of others by production of a thesis which places his/her research in broader context and which is capable of withstanding international intellectual scrutiny.

Admission to this option is a B.Sc. Honours degree in Chemistry with study code 4513.

A dissertation (subject code CEM700) (180 credits) is required for the conferment of the degree. For at least two semesters a candidate does research work on an approved topic in one of the following research areas, namely: Inorganic, Analytical, Physical, or Organic Chemistry of the department and a dissertation in which the research results are thoroughly presented, has to be submitted. An oral examination can be required after submission of the dissertation.

Information

Candidates from learning programmes 4514 and 4515 who wish to follow this option have to consult the Departmental Chairperson as it can be required that additional modules be taken.

(b) Physics

In consultation with the Departmental Chairperson, a choice may be made between the following two options:

- (i) Study code 4792: A dissertation (FSK700) (180 credits): In consultation with the Departmental Chairperson a candidate must do research on an approved topic for at least two semesters, in preparation for a dissertation that will be submitted as the only requirement for the degree. An oral examination may be required which will be arranged with the candidate after the dissertation has been submitted.
- (ii) Study code 4793: Candidates in the National Astrophysics and Space Science Programme (NASSP) must do an Extended research essay (FSK791) (80 credits) on an approved subject, in consultation with the Departmental Chairperson, after having already completed a theoretical course component (FSK725 - Astrophysics and Space Science) (80 credits) presented by the University of Cape Town (UCT) consisting of a total of 5 UCT weight points from the NASSP Master's programme (www.star.ac.za). An oral examination may be required which will be arranged with the candidate after the extended research essay has been submitted.

(c) Geography

The course requires:

GEO700 - A dissertation (120 credits) after completion of an Honours (or equivalent) degree in Geography.

(d) Geology/Mineral Resource Management

A dissertation (GLG700 or MRM700) (120 credits)

For admission candidates with a B.Sc. Honours degree or an equivalent qualification (NQF level 7) in Geology or related subjects will be considered by the Department. A suitable subject for the dissertation will be decided upon in consultation with the Departmental Chairperson.

(e) Geohydrology

Candidates in possession of a B.Sc.Hons. degree in Geohydrology or an equivalent degree may enrol for GHR700. Additional course work may be prescribed where candidates do not have the required background in geohydrology. A suitable subject for a dissertation will be decided upon in consultation with the Departmental Chairperson.

(f) Limnology

Candidates in possession of a B.Sc.Hons. degree in Limnology are admitted to this course, for which a dissertation (LIM700 - 120 credits), based on an approved research project, is required. Persons in possession of a B.Sc.Hons. or B.Sc.Agric.Hons. degree in a related field of study must, in addition to the dissertation, successfully complete theoretical work and assignments (4) in Limnology in order to gain Honours status in Limnology before the dissertation is handed in for examination.

The Limnology Committee will appoint supervisors and decide in which department a candidate will register.

(g) Computer Information Systems

N.B.: "Information Technology" will be referred to as "IT" hereafter.

The following two options apply:

- (i) A Research Master's degree, or
- (ii) An IT Management Master's degree

For both options candidates must have a total of 120 credits to obtain the Master's degree. All candidates have to pass an approved module in research methodology.

Research Master's degree

A dissertation (RIS700 - 120 credits), covering an approved subject of Computer Information Systems, is required.

Management Orientated IT Master's degree

An Honours degree in Computer Information Systems (the IT Management choice) or an equivalent thereof is a prerequisite.

In consultation with the Departmental Chairperson, **six** of the modules mentioned below are decided upon. A subject already taken at Honours level may not again be presented at Master level. Please note that all the modules are not necessarily offered every year. The **six** modules must be compiled out of the three categories, Management Orientated IT, General IT and General Management, as follows:

- Choose **two** modules from Management Orientated IT plus a short research essay. It is compulsory that RIS793 (short research essay) be taken as one of the modules. The short research essay (30 credits) represents the 25% research component of the degree.

- Choose **three** General Management modules from the School of Management's MBA-program.

The list below depicts the IT modules offered as well as their relative categories.

IT Management			Credits
RIS701	-	Network Management	24
RIS710	-	Business Expert Systems	24
RIS712	-	Management Information Systems	24
RIS713	-	Project Management	24
RIS714	-	Decision Support Systems	24
RIS725	-	Data Warehousing and Mining	24
RIS727	-	<i>Capita Selecta</i>	24
RIS728	-	<i>Capita Selecta</i>	24
RIS729	-	<i>Capita Selecta</i>	24
RIS730	-	<i>Capita Selecta</i>	24
General IT			Credits
RIS704	-	Security	24
RIS706	-	Theory of Algorithms (prerequisite WTW224)	24
RIS708	-	Knowledge Based Systems	24
RIS709	-	Expert Systems	24
RIS715	-	Human Computer Interaction	24
RIS716	-	Networks	24
RIS717	-	Object Design	24
RIS718	-	Ethics	24
RIS719	-	Internet Programming	24
RIS721	-	<i>Capita Selecta</i>	24
RIS722	-	<i>Capita Selecta</i>	24
RIS723	-	<i>Capita Selecta</i>	24
RIS724	-	<i>Capita Selecta</i>	24
RIS726	-	<i>Capita Selecta</i>	24

(h) Statistics

An appropriate honours degree and mathematical background are required. Admission is subject to the approval of the Departmental Chairperson.

In consultation with the Departmental Chairperson, a choice may be made between the following options:

- (i) Study code 4792: A research dissertation (STK700 -180 credits) on an approved topic for at least two semesters, or
- (ii) Study code 4793:

A written examination paper on four themes from the following and a compulsory research essay on an approved topic, or at least 150 credits from the following, including the compulsory research essay, and the remainder chosen in consultation with the Departmental Chairperson from Mathematical Statistics, Mathematics, Applied Mathematics, Economics, Money and Banking, or Computer Information Systems. Themes should be chosen such that the module content does not overlap with a successfully completed honours-level module, e.g. STK705 may not be chosen if STK605 was successfully completed. Themes are selected in consultation with the Departmental Chairperson.

The candidate needs 180 credits.

		Credits
STK701	- Operational research	30
STK702	- Advanced Mathematics for Statisticians	30
STK703	- Econometrics	30
STK704	- Non-parametric methods	30
STK705	- Decision theory	30
STK706	- Regression analysis	30
STK707	- Contingency tables	30
STK708	- Quantitative forecasting	30
STK709	- Multivariate analysis I	30
STK711	- <i>Capita Selecta</i>	30
STK713	- <i>Capita Selecta</i>	30
STK792	- Research essay	60

(i) Mathematics and Applied Mathematics

For admission to a Master's degree in Mathematics or Applied Mathematics the candidate needs Mathematics or Applied Mathematics, or the equivalent at Honours level. **Candidates may be required to take additional courses if their backgrounds need strengthening.** The Chairperson of the Department grants admission. The Master's degree requires a total credit value of at least 120, and consists of six elective modules from the following list, as well as the compulsory 32-credit Research Essay. The curriculum is compiled in consultation with the Departmental Chairperson. Appropriate modules from other disciplines may also be included.

Module	2006 Code	2007 Code	Credits
Algebra	WTW704	WTW701	16
Galois theory	WTW714	WTW702	16
Topology	WTW724	WTW703	16
Modern topology	WTW734	WTW704	16
Functional analysis	WTW744	WTW705	16
Measure and integration theory	WTW754	WTW706	16
Coding theory	WTW764	WTW707	16
Discrete Mathematics	WTW774	WTW708	16
Set theory	WTW784	WTW709	16
Group theory	WTW794	WTW710	16
Ring theory	WTX704	WTW711	16
Category theory	WTX714	WTW712	16
Methods of Mathematics	WTX724	WTW713	16
Digital image processing	WTX734	WTW714	16
Numerical linear algebra	WTX744	WTW715	16
Numerical solution of differential equations	WTX754	WTW716	16
Optimisation	WTX764	WTW717	16
Cryptography	WTX774	WTW718	16
Partial differential equations	WTX784	WTW719	16
Fluid mechanics	WTX794	WTW720	16
Biological modeling	WTY714	WTW721	16
Fractional Calculus	WTY724	WTW722	16
Financial Mathematics	WTY744	WTW723	16
Graph Theory	WTY784	WTW724	16

<i>Capita Selecta</i>	WTY764	WTW744	16
<i>Capita Selecta</i>	WTY774	WTW745	16
<i>Capita Selecta</i>		WTW746	16
Research essay	WTW792	WTW792	32

With the approval of the Departmental Chairperson continuous evaluation may be used in certain modules, provided that a candidate only passes if each assignment is completed satisfactorily and a final mark of at least 50% is obtained.

The final mark for any module other than the mini dissertation and continuous evaluation, is the end-of-semester examination mark, or a combination of such mark with the marks of assignments and other evaluations. To pass any module the candidate must obtain at least 50% in the examination and 50% for the combined final mark, when applicable.

(j) Mathematical Statistics

An appropriate honours degree and mathematical background are required. Admission is subject to the approval of the Departmental Chairperson.

In consultation with the Departmental Chairperson, a choice may be made between the following options:

- (i) Study code 4792: A research dissertation (WKS700 -180 credits) on an approved topic for at least two semesters, or
- (ii) Study code 4793:

A written examination paper on four themes from the following and a compulsory research essay on an approved topic, or at least 150 credits from the following, including the compulsory research essay, and the remainder chosen in consultation with the Departmental Chairperson from Mathematical Statistics, Mathematics, Applied Mathematics, Economics, Money and Banking, or Computer Information Systems. Themes should be chosen such that the module content does not overlap with a successfully completed honours-level module, e.g. WKS704 may not be chosen if WKS620 was successfully completed. Themes are selected in consultation with the Departmental Chairperson.

The candidate needs 180 credits.

			Credits
WKS701	-	Bayes analysis I	30
WKS702	-	Measure and probability theory	30
WKS703	-	Stochastic processes	30
WKS704	-	Stochastic simulation	30
WKS705	-	Advanced Mathematics for Statisticians	30
WKS706	-	Multivariate methods	30
WKS707	-	Linear models	30
WKS708	-	Categorical data analysis	30
WKS709	-	Bayes analysis II	30
WKS710	-	Time series analysis	30
WKS711	-	<i>Capita Selecta</i>	30
WKS712	-	Stochastic Models for Reliability and Survival Analysis	30
WKS713	-	<i>Capita Selecta</i>	30
WKS792	-	Research essay	60

(k) Mathematical Statistics (Risk Analysis)

An appropriate honours degree and mathematical background are required. Admission is subject to the approval of the Departmental Chairperson.

In consultation with the Departmental Chairperson, a choice may be made between the following options:

- (i) Study code 4792: A research dissertation (MRA700 -180 credits) on an approved topic for at least two semesters, or
- (ii) Study code 4793:

A written examination paper on four themes from the following and a compulsory research essay on an approved topic, or at least 150 credits from the following, including the compulsory research essay, and the remainder chosen in consultation with the Departmental Chairperson from Mathematical Statistics, Mathematics, Applied Mathematics, Economics, Money and Banking, or Computer Information Systems. Themes should be chosen such that the module content does not overlap with a successfully completed honours-level module, e.g. MRA704 may not be chosen if WKS620 or STK620 was successfully completed. Themes are selected in consultation with the Departmental Chairperson.

The candidate needs 180 credits.

			Credits
MRA701	-	Bayes Statistics	30
MRA702	-	Econometrics	30
MRA705	-	<i>Capita Selecta</i>	30
MRA703	-	Stochastic processes	30
MRA704	-	Stochastic simulation	30
MRA706	-	Modelling extremal events	30
MRA708	-	Statistical Computer Software	30
MRA713	-	<i>Capita Selecta</i>	30
MRA792	-	Research essay	60

WTW723	-	Financial Mathematics	16
ECO724	-	Derivative markets	16
RIS712	-	Informatics	24

Effective mining and mineral beneficiation is dependant on functional integrated management practices that include aspects such as geology, mining, mineral processing, financial management and mining-related legislation, among other.

Mining has traditionally consisted of various disciplines, which have been managed, in a fragmented fashion. The result of fragmented management led to task duplication and non-co-ordination of activities that span the whole spectrum of mining functions. These actions invariably resulted in the development of a high cost structure.

The main objective of mineral resource management is to effectively integrate the relevant fields of expertise so as to manage mining activities in the most cost effective manner possible.

Reg. D38 - Admission requirements

An honours degree or an equivalent qualification (NQF level 7) with appropriate experience will be considered by the University for admission. Depending on the academic background of the candidate additional courses may be prescribed.

Where a candidate with merit does not comply fully with the admission requirements, the Dean, in conjunction with the course co-ordinator, may recommend that the requirements be lifted, with the final decision being taken by the Executive Committee of Senate.

As only a limited number of candidates can be accepted for the theoretical MRM, an application form available from the Department of Geology must be handed in before 31 May of the preceding year, whereafter selection will take place.

The programme consists of compulsory courses, selectable courses and an extended essay.

Reg. D39 - Course composition and contents

The programme will consist of four separate parts taken over a period of at least two years. In phase one candidates will be exposed to basic Geology, Mining, Metallurgy and Business Principles as an introduction before being exposed to more detail in the applied modules. Phase two modules will contain more detail and will also address other skill deficiencies of the candidates. Some of the modules have compulsory contact time used for lectures, case studies, practicals, tasks and tutorials, while others will be interactive internet based. The fourth phase comprises the completion of an extended research essay.

Upon the successful completion of phase one, five modules from phase two, two modules from phase three and phase four, the candidate will obtain a Master in Mineral Resource Management.

Code Course modules

Phase 1

GLG711 Overview of Geology, Mining, Metallurgy and Business Processes
GLG712 Mineral Resource Management I (Methodology)
GLG713 Applied Geology
GLG714 Applied Mining
GLG715 Applied Metallurgy

Phase 2

GLG721 Project Management
GLG722 Information Architecture: Methods and Processes Business Analysis; Benchmarking
GLG723 Change Management: Organisational, Process, Behavioural, Culture
GLG724 "Virtual Mining" Simulation and Optimisation
GLG725 Mineral Resource Management II (Advanced): Grade Control, Ore Balance Sheets, Ore Utilisation
GLG726 Geological Modelling and Applied Geostatistics

Phase 3

GLG731 Capita Selecta
GLG732 Financial cost modelling and decision making
GLG733 Risk management in the mining and minerals industry
GLG734 Modern mining supply chain principles
GLG735 The role of enterprise management systems in resource management

Phase 4

GLG791 Extended research essay. Subject chosen in consultation with course co-ordinator. The candidate must carry out a research task under supervision and present an extended research essay. The extended essay must be submitted for formal examination.

All the modules comprise 10 credits each while the extended research essay counts 60 credits. Modules GLG712, GLG713, GLG714, GLG715, GLG725 and GLG726 serve as background to the extended research essay.

Reg. D40 - Organisation of course

Dates during which modules will be presented will be announced at the beginning of each year.

Reg. D41 - Examination

Continuous evaluation of assignments and tutorials will contribute to the course aggregate, which together with the formal examination, in June and November, will make up the final mark. Modules GLG721, GLG724, GLG725 and GLG726 will, however, be examined only by means of continuous evaluation of assignments and tutorials.

The extended research essay (GLG791) will be evaluated by the supervisor(s) and an external moderator. To obtain the Master's degree in Mineral Resource Management, a minimum pass mark of 50% in each module, including the extended research essay, is required.

INFORMATION

For regulations regarding undermentioned fields of study consult Calendar Part 2: Architecture, Quantity Surveying and Construction Management and Urban and Regional Planning.

- Students who enrol for the Magister Scientiae (Counselling Psychology) by dissertation, register under the code 4751.
- Students who enrol for the Structured Magister Scientiae (Counselling Psychology), register under the code 4752.

For detailed information, see Calendar, Faculty of the Humanities.

This programme will be replaced by the Bachelor of Spatial Planning and the Magister of Spatial Planning if approved by the Dept of National Education.

Programmes in Urban and Regional Planning: Residential and Compact Learning

The two-year full-time or three year part-time programme results in the student obtaining the Master's degree in Urban and Regional Planning, which is recognized by the South African Council for Urban and Regional Planners (SACTRP).

Reg. D63 - Entrance Requirements

- (a) A person may be admitted to the afore-mentioned programme in Urban and Regional Planning if he/she is in possession of one of the following qualifications and has the necessary academic background:
 - (i) A Bachelor's degree in Urban and Regional Planning.
 - (ii) A Bachelor's degree in commerce, Public Management or law.
 - (iii) A Bachelor's degree in Architecture, Civil Engineering, Land Surveying, Quantity Surveying, Construction Management, Land and Property Development Management.
 - (iv) A degree with one of the following majors: Agricultural Economics, Anthropology, Applied Mathematics, Botany, Business Management, Computer Information Systems, Economy, Environmental Science, Forestry, Geology, Geography, Mathematical Statistics, Psychology, Public Management, Sociology or Statistics.
- (b) If a student does not entirely meet the admission requirements, the Dean may, in consultation with the Head of the Department, in meritorious cases, recommend that some concessions be made in respect of the requirements, with the final decision resting with the Executive Committee of the Senate. Supplementary courses may be required as determined by the Head of the Department or a student may be expected to do an extra year to complete the programme.
- (c) A person in possession of one of the above-mentioned qualifications will not automatically be accepted for the programme. Selection takes place and the Head of the Department could require a written motivation or personal interview.
- (d) Language skills in the language medium that students wish to do the programme (English or Afrikaans) will be tested. An acceptable module in the use of language (for example ENG104) as determined by the Head of the Department, will have to be taken and passed at the student's own cost should he/she not comply with the required standard before the commencement with the dissertation.
- (e) A test for computer literacy will also be conducted. If the student does not comply with the standard as determined by the head of the department he/she has to take a computer skills module at the his/her own cost and to be passed within the first year.

Reg. D64 - Duration, organization and outcome of the programme

A minimum study period of two years is required to obtain the Master's degree in Urban and Regional Planning. In the case of part-time candidates the period of study extends over three years. The Head of the Department determines how the modules must be distributed over the

years of study and in all programmes (full time, part time and compact learning) the modules may be spread over an extra year if a student does not have the necessary academic back ground.

The M.U.R.P. programme can also be done by attending block modules (compact learning). As for the part-time students, the programme will also be done over a period of 3 years. For compact learning students four work session weeks per year for the first two years of the programme. These are compulsory and will be determined by the Head of Department. These sessions must be attended at the department. During these sessions lectures, tutorials, practicals and discussions will take place. Assignments, tests and examinations will also be done in this period. The third year of study will be used for the dissertation.

After completing the M.U.R.P. programme, the graduates will obtain a professional degree and will possess the following skills:

- A thorough knowledge of the nature and goal of Urban and Regional Planning and Planning Theory, Philosophy and Ethics.
- The ability to complete practical urban and regional planning projects including township layouts and township establishment, the completion and management of different types of plans and urban development management.
- Knowledge of environmental affairs, housing and urbanization problems of the country, urban infrastructure and transport.
- Sensitivity for the process of public participation and the importance of transparency in the compilation of plans and policies.
- The capacity to write reports in a logical and comprehensible way, to orally communicate recommendations to all interested and affected parties and to apply professional planning decisions in practice.

After sufficient practical training the graduate will be able to register as Urban and Regional Planner at the South African Council for Urban and Regional Planners. Even though the programme is not internationally accredited as such, graduates from this department are working in the U.K. Ireland, U.S.A., Canada, Australia and New Zealand.

Reg. D65 - Curriculum

The composition of the student's curriculum and optional courses will be determined at the beginning of each year in consultation with the Head of the Department. Two programmes are presented *viz* :

a) Lectured Master's degree (304 credits)

For the Master's degree in Urban and Regional Planning, students must, in addition to the compulsory 160 credits of the major modules, provide semester modules to a minimum of 144 credits as determined by the Head of the Department according to needs and background.

Major Modules (compulsory - 160 credits)

Code	Description	Credits	Prerequisite
BTR714	Basic theory of urban planning	16	
GTR724	Advanced theory of urban planning	16	BTR714
BCP712	Basic computer use for planners	8	
BSP712	Basic urban planning practice	8	
GCP722	Advanced computer use for planners	8	BCP712
GSP722	Advanced urban planning practice	8	BSP712
BRT714	Basic theory of urban planning	16	
ATS724	Advanced theory of regional planning	16	BRT714

ISR712	Introductory studies in regional planning	8	
TSP793	Research: Investigation in regional planning	24	ISR712
SSS792	Research essay or relevant publishable scientific article	32	

The research essay or article (SSS792) is presented after completion of at least one of the groups of major modules, i.e. BTR714, GTR724, BCP712, BSP712, GCP722 and GSP722 or BRT714, ATS724, ISR712 and TSP793. The article should be accepted by an accredited journal as a scientific article before graduation can take place.

The major modules in Urban and Regional Planning may be taught during alternative years.

Compulsory Semester Modules (64 credits)

Code	Description	Credits
BET714/724	Planning ethics	16
BGO714/724	Environmental planning	16
BMK712	Planning methodology	8
BNA722	Planning research	8
EVB714/724	Economics & entrepreneurship for planners	16

Optional Modules from 2004 (80 credits)

Code	Description	Credits
BEH712/722	Housing	8
BGM712/722	Urbanization and Metropolitan planning	8
BGR712/722	Planning management	9
BVG712/722	Planning for Sustainable communities	8
CSB712	Capita selecta in planning 1	8
CSB722	Capita selecta in planning 2	8
CSB702	Capita selecta in planning 3	8
CSB704	Capita selecta in planning 4	16
END712/722	Property development and valuation	8
GBE712/722	Geography for planners	8
GIB714/724	Geographic Information Systems (GIS) for planners	16
GOB712/722	Integrated development planning	8
LGB712/722	Planning of rural areas	8
OEB712/722	Development economics	8
OGG712/722	Development planning	8
PDF712/722	Public participation and facilitation	8
PPB712/722	Professional practice and project management	8
RBT712/722	Planning for tourism	8
RPB712/722	Management of the Spatial plan	8
SBF712/722	Strategic Spatial planning and financial management	8
SOB622	Sociology for planners	8
STO712/722	Urban design	8
TVB712/722	Futurology for planners	8
VVB712/722	Transportation	8

Students can specialize in the following fields:

(i) Sustainable rural development with modules:

LGB712/722, OGG712/722 and OEB712/722

(ii) Tourism and development:

RBT712/722, OGG712/722 and PDF712/722.

(iii) Planning for communities with three of the four modules:

PDF712/722, BVG712/722, STO712/722 and TVB712/722.

(iv) Integrated development planning with modules:

GOB712/722, SBF712/722 and RPB712/722.

Optional modules for students before 2004

New Code	Old code
BEH712/722	BEH714/724
BGM712/722	BGM714/724
BGR712/722	BGR714/724

TVB712/722	TVB714/724
VVB712/722	VVB714/724

b) Master's degree by means of research

Students in possession of a four year Bachelor's degree (accredited by the SACTRP) in Urban and Regional Planning, may obtain a M.U.R.P. degree by (i) writing a dissertation (SSS700 – 120 credits) as well as by (ii) the publication (or acceptance for publication) a scientific article in an accredited journal. Supplementary study might be required and will be determined individually by the Head of the Department.

Reg. D66 - Transitional regulations

All students who registered before 2004 will follow the programme set out in previous yearbooks.

Major modules

VVB712/722	Transport	SSS729

Reg. D67 - Pass Requirements

In addition to the requirements as set out in the general regulations, the following will also apply.

Examination

- (i) For all the modules, with the exception of SSS798, a joint examination mark is calculated from a year/semester mark and an examination mark.
- (ii) For all modules presented by the Department of Urban and Regional Planning, the final examination will be conducted orally and no second examination opportunity will be offered, except in cases where the Head of the Department decides otherwise.
- (iii) For major modules such as BSP712/GSP722 and BCP712/GCP722, that are linked, it is required that both modules, BSP712 and BCP712, must be passed in the first semester to be able to continue in the second semester with GSP722 and GCP722.
- (iv) For modules presented by other departments, e.g. SOB625 and others, the appointed moderator will be a staff-member of the Department of Urban and Regional Planning. For non-major modules, the Head of the Department can promote a student who has a 65% semester mark and thus exempt the student from examination in those modules.
- (v) For the course SSS798, a dissertation or relevant publishable scientific article is required and an external examiner will be responsible for the evaluation of the dissertation, which also

includes oral examination. The article should be accepted by an accredited journal for publication as a scientific article to be regarded as an alternative to the dissertation.

- (vi) The degree is awarded to a student who obtains a minimum of 304 credits for the programme.
- (vii) The degree is awarded with distinction to a student who obtained an average of 75% in SSS792, GTR724, BRT714, ATS724, BTR714, BSP712, BCP712, GSP722, GCP712, ISR712 and TSP793.

For persons who are in possession of a Bachelor's degree in Urban and Regional Planning and who do a dissertation, the normal requirements to pass, as set by the general regulations at the university, will apply.

Reservation

If new programmes are approved by Dept of National Education for 2005 both programmes will apply.

NB

THIS PROGRAM IS SUBJECT TO APPROVAL BY THE NATIONAL DEPARTMENT OF EDUCATION

MAGISTER (URBAN AND REGIONAL PLANNING)

M.U.R.P.

Programme in Urban and Regional Planning: Residential and Compact Learning

The one-year full-time/part-time programme results in the obtaining of the Master's degree in Urban and Regional Planning, which is recognized by the South African Council for Urban and Regional Planners (SACTRP).

Reg. D68 - Entrance requirements

- (a) A person may be admitted to the aforementioned program in Urban and Regional Planning if he/she is in possession of one of the following qualifications and has the necessary academic background:
 - (i) A Honours degree (B Hons (SP) or similar) in Urban and Regional Planning.
- (b) If a student does not entirely meet the admission requirements, the Dean may, in consultation with the Head of the Department, in meritorious cases, recommend that some concessions be made in respect of the requirements, with the final decision resting with the Executive Committee of the Senate. Supplementary courses may be required as determined by the Head of the Department or a student may be expected to do an extra year to complete the programme.
- (f) A person in possession of one of the abovementioned qualifications will not automatically be accepted for the programme. Selection takes place and the Head of the Department could require a written motivation or personal interview.
- (g) Language skills in language medium that students want to do the programme (English or Afrikaans) will be tested. An acceptable module in the use of language (for example ENG104) as determined by the Head of the Department, will have to be taken and passed at the students' own cost should he/she not comply with the required standard before the dissertation can be started.

- (h) A test for computer literacy will be conducted. If the student does not comply with the standards, as determined by the Head of the Department, he/she has to take and pass a computer skills module at the students own cost during the first year.

Reg. D69 - Duration, organization and outcome of the program

To obtain the Master's degree in Urban and Regional Planning a minimum period of one year is required. The Head of the Department determines how the modules must be distributed over the years of study and in all programmes (Full time, Part time and Compact Learning) the modules may be spread over an extra year if a student does not have the necessary academic back ground.

The M.U.R.P. programme can also be done through block modules (compact learning). As for part time students the course is distributed over two years. For compact learning students four workshop weeks per year for the duration of the program are compulsory and that will be determined by the Head of Department. These workshops must be attended at the department. During these workshop lectures, tutorials, practicals and discussions will take place. Assignments, tests and examinations will also be done.

After completing the M.U.R.P. programme, the graduates will obtain a professional degree and will possess the following skills:

- A thorough knowledge of the nature and goal of Urban and Regional Planning as well as Planning Theory, Philosophy and Ethics.
- The capacity to complete practical urban and regional planning projects including township layouts and township establishment, the compilation and management of different types of plans and urban development management.
- Have thorough knowledge of environmental aspects, housing and urbanization problems of the country, urban infrastructure and transport provision.
- Sensitivity for the process of public participation and the importance of transparency in the compilation of plans and policies.
- The capacity to write reports in a logical and comprehensible way, to orally communicate recommendations to all the stakeholders and to apply professional planning decisions in practice.

After sufficient practical training the graduate will be able to register as Urban and Regional Planner at the South African Council for Urban and Regional Planners. Even though the program is not internationally accredited as such, graduates from this department are working in the U.K. Ireland, U.S.A., Canada, Australia and New Zealand.

Reg. D70 - Curriculum

The composition of the students' curriculum and optional courses will be determined at the beginning of each year in consultation with the Head of the Department. Two programmes are presented, namely:

a) Taught Master's degree (200 credits)

For the Master's degree in Urban and Regional Planning, students must, in addition to the compulsory 136 credits of the major modules, take semester modules to a minimum of 64 credits as determined by the Head of the Department according to their needs and background.

Major (Fundamental and Core) Modules (136 credits)

Module	Description	Module type	Credits
GTR704	Advanced Research in Urban Planning	Fundamental	16
TSP792	Research essay: Applied Regional Planning programme	Fundamental	32
SSS791	Extended research essay or publishable article	Core	88

Elective Modules (64 credits)

Code	Description	Credits
BEH752/762	Housing	8
BGM752/762	Urbanization & Metropolitan planning	8
BGR752/762	Planning management	8
BVG752/762	Planning for sustainable communities	8
CSB752	Capita selecta in planning 1	8
CSB752	Capita selecta in planning 2	8
CSB702	Capita selecta in planning 3	8
CSB704	Capita selecta in planning 4	16
ENB752/762	Property development & Valuation	8
GBE752/762	Geography for planners	8
GIB754/764	Geographic information systems for planners	16
GOB752/762	Integrated Development Planning	8
LGB752/762	Planning of rural areas	8
OEB752/762	Development Economics	8
OGG752/762	Development planning	8
PDF752/762	Public participation & facilitation	8
PPB752/762	Professional practice & project management	8
RBT752/762	Planning for tourism	8
RPB752/762	Control of the Spatial Plan	8
SBF752/762	Strategic spatial planning and financial management	8
SOB662	Sociology for planners	8
STO752/762	Urban design	8
TVB752/762	Futurology for planners	8
VVB752/762	Transportation	8

Students can specialize in the following fields:

- (i) **Sustainable rural development with modules**
LGB712/722, OGG712/722 and OEB712/722
- (ii) **Tourism and Development with modules:**
RBT712/722, OGG712/722 and PDF712/722
- (iii) **Planning for communities with three of the four modules:**
PDF712/722, BVG712/722, STO712/722 and TVB712/722
- (iv) **Integrated Development Planning with the following modules**
GOB712/722, SBF712/722 and RPB712/722

(b) Master's degree through research

Students in possession of a four year Bachelor's degree (accredited by the SACTRP) in Urban and Regional Planning, may obtain a M.U.R.P. degree by (i) writing a dissertation (SSS700 - 180 credits) as well as (ii) the publication (or acceptance for publication) of an article in an accredited journal. Supplementary study may be required and will be determined individually by the Head of the Department.

Reg. D71 - Transitional Regulations

All students who registered before 2005 will follow the programme set out in previous calendars.

Reg. D72 - Pass requirements

In addition to the requirements as set out in the general regulations, the following shall also apply.

Examination

- (i) For all the modules, with the exception of SSS791, a joint examination mark is calculated from a year/semester mark and an examination mark.
- (ii) For all modules presented by the Department of Urban and Regional Planning, the final examination will be conducted orally and no second examination opportunity will be offered, except in cases where the Head of the Department decides otherwise.
- (iii) For modules presented by other departments, e.g. SOB625 *inter alia*, a moderator will be appointed from the Department of Urban and Regional Planning.
For elective modules, as determined by the Head of the Department, a student can be promoted with a semester mark of 65% and thus be exempted from examination in those modules
- (iv) For the module SSS791 an extended research essay or article is required and an external examiner will be appointed for the evaluation which will include an oral examination. The article must have been accepted as a scientific article by an accredited journal in order to serve as an alternative for the extended research essay.
- (v) The degree is awarded to a student who obtains a minimum of 200 credits in the programme.
- (vi) The degree is awarded with distinction to a student who obtained an average of 75% in SSS791, GTR724 and TSP726 in the prescribed minimum study years.

For persons who are in possession of a Bachelor's degree in Urban and Regional Planning and who write a dissertation, the normal requirements to pass, as set by the general regulations at the University will apply.

Reservation

If the new programme is approved by the National Department of Education for 2005, both M.U.R.P. programmes will apply.

MAGISTER SCIENTIAE IN HOME ECONOMICS
Study code 4770

- Students who enrol for the Magister Scientiae (Home Economics) by dissertation, register under the code 4771.
- Students who enrol for the structured Magister Scientiae (Home Economics), register under the code 4772.

CURRICULUM**Reg. D42 - Requirements**

- a) A dissertation (HDK700 - 128 credits) is required
or
- b) VWS701, VWS702 and VWS703 or HDK701 or VDG701 (60 credits) applicable to the theme of research and an extended research essay (HDK791 - 68 credits).

MAGISTER IN ENVIRONMENTAL MANAGEMENT
Study code 4790

M.E.M.
Course code 700

- Students who enrol for the Magister Scientiae (Environmental Management) by dissertation, register under the code 4795.
- Students who enrol for the structured Magister Scientiae (Environmental Management), register under the code 4796.

Reg. D43 - Entrance requirements

A three-year degree or an equivalent qualification with appropriate experience will be considered by the University for admission. Depending on the academic background of the candidate additional modules may be prescribed.

Where a candidate with merit does not comply fully with the admission requirements, the Dean, in conjunction with the Management Committee, may recommend that the requirements be partially waived.

As only a limited number of candidates can be accepted, an application form available from the Centre for Environmental Management must be handed in before 15 October of the preceding year, whereafter selection will take place.

The programme consists of compulsory modules, choice modules and a mini-dissertation.

Reg. D44 - Course composition and content

The programme is offered interdisciplinary and will be presented by the Faculty of Natural and Agricultural Sciences in conjunction with the Faculties of Health Sciences, Economic and Management Sciences, Law and Humanities under the control of the Centre for Environmental Management and a Management Committee.

The programme will consist of four separate modules, each taking six months. In the first two modules the basic principles and concepts of the natural environment, as well as planning and management aspects will be covered, the third will be a speciality module and the fourth a mini-

Semester 4
Compulsory module

MOB791 (96 credits) - Extended research essay and specialisation development

Candidates must carry out a research task under supervision and submit it for examination in the form of extended research essay. The subject and supervisor(s) will preferably be linked to the module chosen from among MOB741-744.

Reg. D45 - Organisation of course

At the start of each semester candidates will spend two weeks at the campus in Bloemfontein where the introductory lectures, tutorials, practicals and discussions will take place and the work programme finalised.

Upon completion of all four modules in the programme the candidate should, in summary, have the following knowledge and skills:

- A basic knowledge of resources and processes in ecosystems and the role of influences upon ecosystems.
- Analytical skills to determine impacts and the state of the environment.
- An ability to provide solutions to environmental problems.
- Research skills in a speciality direction.
- Be able to carry out impact analyses and have knowledge of legal aspects affecting the environment.
- An understanding of resource conservation, specific political and sociological tendencies where they affect the environment, including ecotourism.

Reg. D46 - Examination

Continuous evaluation of work and assignments will contribute to the semester mark, which together with formal examination (MOB707, MOB708 and MOB741-744), will make up the combined mark. Examination will take place at the end of each semester. To obtain the Master's degree the candidate will be required to obtain at least 50% in each of the assignments, orals, formal examinations and extended research essay.

Formal examinations will contribute 40% of the combined mark, and the semester mark (and oral where applicable) 60%, of MOB707, MOB708 and MOB741-744. MOB707, MOB708 and MOB741-MOB744 each contribute 20% and MOB791 40% to the final course mark. In order to obtain the Master's degree with distinction a mark of 75% should be obtained.

The extended research essay (MOB791) will be evaluated by the assessor(s) and a moderator.

Doctor's degrees

The following Doctor's degrees are conferred in this Faculty:

Degree	Abbreviation	Study code	Course code
(i) Doctor Scientiae	D.Sc.	4900	900
(ii) Doctor Architecturae	D.Arch.	4910	900
(iii) Philosophiae Doctor	Ph.D.	4920	900

The degree of Philosophiae Doctor is conferred in the following fields:

Applied Mathematics, Architecture, Astronomy, Behavioural Genetics, Biochemistry, Biotechnology, Botany, Chemistry, Computer Information Systems, Entomology, Environmental Management, Food Science, Genetics, Geochemistry, Geography, Geology (GLG), Geohydrology, Grassland Science, Home Economics, Limnology, Mathematics and Mathematical Statistics, Microbiology, Mineral Resource Management (MRM), Plant Molecular Biology, Psychology, Physics (an oral examination on the thesis can be required), Property Science, Quantity Surveying and Construction Management, Soil Science, Statistics, Urban and Regional Planning, Wildlife, Zoology.

REGULATIONS

Reg. D47 - Admission

- (a) The general regulations regarding Doctor's degrees apply to this Faculty *mutatis mutandis*.
- (b) Candidates have to apply to the Departmental Chairperson for admission to the Doctor's degree study.
- (c) **Limnology**

To be admitted to the Ph.D. a candidate must be in possession of an M.Sc. in Limnology. Persons in possession of an M.Sc. degree in a related field of study will, in addition to the dissertation, have to complete theoretical work and assignments (4) in Limnology before the thesis can be handed in for examination. Two assignments shall take the form of presentations, and examination takes place orally.

The Limnology Committee will appoint supervisors and decide in which department a candidate will register.

- (d) **Psychology**

As far as the Ph.D. degree in Psychology is concerned, a thesis (SIL900) is compulsory or one of the following two taught courses can be followed:

- Ph.D. degree in Psychology on: Child psychology and related fields.
- Ph.D.-degree in Psychology on: Clinical Hypnosis.

(See Calendar Book Part 6, Faculty of Humanities, for further details.)

(e) Environmental management

To comply with the admission requirements a candidate must possess a MEM degree before registering for the Ph.D. degree. Individuals holding another Master's degree may be considered for admission. In such instances the Management Committee of the Centre for Environmental Management may supplement the thesis with assignments, taken from the MOB700 course, which must be completed prior to the thesis being submitted for examination. The Management Committee of the Centre for Environmental Management will assign promoters and decide upon which department a candidate should register in.

(f) Biotechnology

A candidate must be in possession of a Master's degree in Microbiology, Biochemistry, Food Science, Biotechnology or related discipline. Candidates in possession of a Master's degree in related subjects (e.g. Botany, Zoology, Chemistry, Chemical Engineering) can be requested by the Biotechnology Committee to complete theoretical work, work assignments and/or modules additionally to the thesis before the thesis is submitted for examination.

Reg. D48 - Requirements

A candidate does research for at least four semesters on an approved topic selected in consultation with the Departmental Chairperson in preparation of a thesis which serves as the only requirement for the degree. The candidate will present at least one seminar/research report in each year of study in accordance with departmental regulations.

DOCTOR OF ARCHITECTURAE
Study code 4910

Reg. D49 - Regulations as for Ph.D.

DOCTOR SCIENTIAE
Study code 4900

Reg. D50 - A candidate for the D.Sc. degree must consult the General Regulations.

SYLLABI

Behavioural Genetics

GG692 (32 credits) - Research essay

This course stretches over the whole year and involves a research project under the guidance of two lecturers (one from Genetics and one from Psychology). The choice of a subject for the project is done in consultation with Programme Leader. The results of the project must be submitted in the form of a typed scientific paper for examination. An oral presentation of 15 minutes with 5 minutes for questions on the research project is required.

After the successful completion of the module, the student should be skilled in problem identification, hypothesis formulation, planning, conducting and analysis of experiments as well as the interpretation and communication of results.

GG693 (24 credits) - Research: Literature study

A review paper on a psychological subject is written and presented orally on a date determined by the Programme Leader.

The subject of the review paper should differ from that of the research project and is selected in consultation with the Programme Leader. On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.

GEN634 (16 credits) - Behavioural Genetics

Class discussion for three hours and a six-hour practical per week.

One examination paper of four hours.

Determination of the inheritance of behavior, single gene vs. polygenic inheritance, allelism, pleiotropy, epistasis; studies of twins; pedigrees; experimental design; gene frequencies in populations.

After the successful completion of the module, the student should be able to plan and execute a behavioural genetic study, identify factors influencing behaviour and determine the influence of inheritance on behaviour.

SIL613 (12 credits) - Psychopathology

See Dept. Psychology (Faculty of Humanities)

SIL614 (12 credits) - Developmental Psychology

See Dept. Psychology (Faculty of Humanities)

XXX000 - Advanced specialised course

A combination of advanced courses or topics in Genetics, Psychology or an Honours course from a suitable subject area, which can meaningfully complement the field of study.

Biochemistry

BOC614 (16 credits) - General analytical and chromatographic techniques in Biochemistry

Research techniques in biochemistry: serological techniques, chromatographic, spectroscopic and other analytical techniques for the analysis of biomolecules and products.

BOC634 (16 credits) - Enzymology

Rate equations: single and dual substrate reactions, allosteric enzymes. theory of catalysis: thermodynamic and kinetic principles, mechanisms applied in catalysis. Enzyme reaction mechanisms. Application of principles of catalysis in selected reaction mechanisms e.g. serine esterases, dehydrogenases, lysozyme, etc. Enzyme applications in organic chemistry.

BOC654 (16 credits) - Advanced protein structure and function

Protein homogeneity, amino acid analysis, preparation of proteins for sequence determination, handling glycoproteins, fragmentation of proteins and separation of fragments, Nterminal and C-terminal sequencing, secondary structure prediction, tertiary structure prediction, quaternary structure, physical methods for determining secondary and tertiary structure: circular dichroism, NMR, mass spectrometry, X-ray diffraction.

BOC674 (16 credits) - Advanced molecular biology

Training in the reading and interpretation of publications in molecular biology and the presentation of a seminar on a current molecular biology topic. The use of advanced molecular biology techniques as well as training in computer software associated with the analysis of DNA information. Students will also be expected to do selfstudy on selected topics that are related to molecular biology.

BOC622 (8 credits) - Oral examination of theory and practical

The oral examination is normally scheduled for November. A panel consisting of lecturers from the Department of Microbiology and Biochemistry, and including an external examiner, is convened for this purpose. It is expected of students to answer questions relating to aspects of the Biochemistry Honours course.

BOC693 (24 credits) - Research: Literature study

Students carry out a literature survey on a topic supplied to them by a lecturer acting as mentor. A literature review covering the chosen topic is written and also presented orally. The written portion of the module is evaluated by the mentor as well as an external examiner and marks are allocated as set out in the course guidelines.

BOC692 (32 credits) - Research essay

Students conduct research on a topic supplied to them during the first semester by a lecturer acting as mentor, and in consultation with the Departmental Chairperson. A written research report is prepared and also presented orally. The written portion of the module is evaluated by the mentor as well as an external examiner and marks are allocated as set out in the course guidelines.

Biotechnology

BTG622 (8 credits) - Oral examination of theory and practical

The oral examination is normally scheduled for November. A panel consisting of lecturers from the Department of Microbiology and Biochemistry, and including an external examiner, is convened for this purpose. It is expected of students to answer questions relating to aspects of the relevant Biochemistry, Biotechnology and Microbiology Honours modules.

BTG693 (24 credits) - Research: Literature study

Students carry out a literature survey on a topic supplied to them by a lecturer acting as mentor. A literature review covering the chosen topic is written and also presented orally. The written portion of the module is evaluated by the mentor as well as an external examiner and marks are allocated as set out in the course guidelines.

BTG692 (32 credits) - Research essay

Second semester.

Students conduct research on a topic supplied to them during the first semester by a lecturer acting as mentor, and in consultation with the Departmental Chairperson. A written research report is prepared and also presented orally. The written portion of the module is evaluated by the mentor as well as an external examiner and marks are allocated as set out in the course guidelines.

Botany

PWS614 (16 credits) - Research techniques

Full day lectures and practicals for the first three weeks of the honours study.

An oral examination will be undertaken on completion of the module.

Lectures and practical sessions pertinent to techniques and skills .

PLK693 (24 credits) - Research: Literature study

A dissertation must be written and presented on a date determined by the Departmental Chairperson.

The student compiles a review of a specific subject and delivers a presentation on the topic.

On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.

PLK692 (32 credits) - Research essay

Research project stretches over the whole year.

An oral presentation and a project report are required.

The student completes a research project under the guidance of a supervisor.

On completion of this module the student is acquainted with problem identification, hypothesis formulation, planning, conducting and analysis of experiments as well as the interpretation and communication of results.

PLK614 (16 credits) - Plant ecology

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

The nature of quantitative plant ecology and vegetation science, the description of vegetation in the field, the nature and properties of vegetation data, basic statistical analysis of vegetation and environmental data, ordination methods, phytosociology and the Zürich-Montpellier school of subjective classification, numerical classification and phytosociology, computer programs for vegetation and environmental data, quantitative plant ecology, vegetation science and the future, applications in the South African situation.

After the successful completion of the module the student should be able to manage some vegetation analysis techniques as well as some data managing techniques applicable to plant ecology

PLK624 (24 credits) - Plant physiology I (Metabolism and growth)

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

Mitochondrial electron transport in plants: - cyanide sensitive electron transport, alternative oxidase pathway, rotenone non-sensitive complex, exogenous NADH oxidase pathway and oxidative phosphorylation.

Secondary metabolism related to lipid mobilization in plants.

Hydroponics as an alternative plant cultivation and research technique: - systems, importance of different nutrient media, sterilization, pH, conductivity, pest control, etc. Hydroponics versus organic versus conventional cultivation practices.

After completion of the module the student will be able to do research related to respiratory and lipid metabolism in plants. Furthermore, the student will be able to cultivate plants hydroponically and apply hydroponics as a research technique in plant physiology.

PLK634 (16 credits) - Algal biotechnology

Four hours preparation, one hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

Introduction to algal biotechnology, student organisms, factors which influence algal growth, photobioreactors, turbulence, photosynthesis in high density media, process management, product handling, products, markets and financial considerations. During practicals processing and quality aspects will receive special attention.

After the successful completion of the module the student will be able to manage an algal biotechnological pilot plant and be able to optimize production processes.

PLK644 (16 credits) - Plant physiology II (Plant defence and applications)

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

The plant's defence mechanisms in relation to biotic stress factors such as injury, insects and pathogens. Resistance and susceptibility are explained in terms of defence mechanisms. Constitutive versus induced defence mechanisms, eliciting and signal transduction mechanisms, secondary defence reactions, plant activators, manipulation of resistance, relation to new alternative, but very exciting, uses of plants.

After completion of the module the student should be able to get innovatively involved in the manipulation of resistance in plants.

PLK654 (16 credits) - Limnobotany

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

Introduction to limnology, physical characters of water environment, morphological and morphometric characteristics of the water environment, plant communities, production and productivity, water ecosystems.

After the successful completion of the module the student will be able to study the functioning of fresh water ecosystems and enter into research that can lead to an M.Sc. degree.

PLK664 (16 credits) - Plant diversity and taxonomy of higher plants

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

Nomenclature, plant structure and taxonomy, floral diversity and pollinators, origin and classification of the angiosperms, sources of taxonomic evidence, cladistics and herbarium management.

On completion of the module a student will be able to identify and classify flowering plants, have a working knowledge of taxonomic literature, be able to apply basic taxonomic principles in the description and nomenclature of plant species, be familiar with the functioning, basic management and use of the herbarium.

PLK674 (16 credits) - Micromorphology and ultrastructure

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

The module deals with the study of taxonomic useful characteristics with the aid of a light microscope (LM), scanning electron microscope (SEM) and transmission electron microscope

(TEM). Emphasis is laid on pollen morphology, reproductive biology and the leaf surface (stomata, trichomes, secretory structures, cuticle and epicuticular wax).

After completion of the module the student ought to be familiar with the techniques used to do a microscopic investigation, interpret and use characteristics for taxonomic purposes.

PLK684 (16 credits) - Palynology and palaeoenvironments

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

Stratigraphic units, dating, palynology, Quaternary and recent pollen analysis, palaeontology and archaeology, stable isotopes, Milankovitch cycles (orbital changes), palaeoclimate of Africa.

After completion of this module the student will be able to identify pollen types in connection with research on environmental processes or atmospheric allergens, and will be able to act as consultant in connection with eco-tourism, conservation, and the determination of environmental conditions relating to deposition of fossil material.

XXX000 - Advanced specialized module

A combination of advanced modules or subjects from Botany or a honours module from an appropriate discipline, which would be a meaningful supplement to the student's field of study.

PWS634 (16 credits) - Plant molecular applications

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

Immunological characterization of plant gene products, the analysis of gene expression on both single and multiple gene level by using Southern and Northern blots, RT-PCR, antisense technology, DNA micro and macro arrays, expressed sequence tags (ESTs), serial analysis of gene expression (SAGE), 2-D protein gel analysis, protein-protein interaction using yeast two-hybrid analysis.

After the successful completion of the module, the student should be able to characterize plant proteins using the relevant immunological techniques and be able to determine the expression of plant genes under different growth conditions.

Entomology

ENT614 (16 credits) - Research Techniques, Scientific Methodology and Scientific Communication

After completion of this module the student will be familiar with selected techniques applicable in Entomology, as well as accessing scientific literature, organizing and evaluating scientific information, compilation of information according to scientific standards and format, and written and oral scientific communication skills.

ENT622 (8 credits) - Quantitative Ecology

This module will be presented jointly by lecturers of Zoology & Entomology and Environmental Management and upon completion students will be familiar with the measurement of the biotic components of an ecosystem.

ENT632 (8 credits) - Biodiversity (Evolution & Biogeography)

Upon completion of this module students will be familiar with evolutionary change as the cornerstone of biological sciences.

ENT642 (8 credits) - The Environment

This module will be jointly presented by lecturers of Zoology & Entomology and Environmental Management and will familiarize students in the latest developments regarding environmental sustainability and the role of man in this regard.

ENT654 (16 credits) - Insect - Plant Interactions

Upon completion of this module students will be familiar with the close association that exists between plant-feeding insects and their host plants. Knowledge of this has a strong application value in investigations where natural vegetation and cultivated plants are concerned.

ENT664 (16 credits) - Medical and Veterinary Entomology

This module deals with the bio-ecology, vector potential, disease transmission and parasite-host relationships of insects of medical and veterinary importance. After completion of this module the student will have a fundamental knowledge of insects of medically and veterinary importance and the diseases they transmit. The person will be able to work as a research assistant at a research institute.

ENT674 (16 credits) - Forensic Entomology

This module deals with the use of insects in criminal investigations of crime, especially violent crime such as murder, homicide, suicide and the neglect of children and elderly people. After completion of this module the student will have a fundamental knowledge of insects of forensic entomological importance and he/she will be able to determine the *postmortem interval* of a corpse. The person will be able to assist as a team member in a forensic science investigation team.

ENT684 (16 credits) - Pest Management

After completion of this module students will have attained knowledge regarding the modern approaches towards all facets of pest management on plants and animals.

ENT692 (32 credits) - Research essay

The research project extends over the whole year.

An oral examination and project report is required.

The student completes a project under the supervision of a supervisor and is introduced to problem identification, hypothesizing, planning, executing, analyzing, interpreting and communication of results. The independence and scientific insight that is developed here provides opportunities for further post-graduate studies.

XXX000 - Advanced related module

This module is selected from an applicable course outside Entomology and offers the opportunity for a sensible supplement to the field of study of the student.

Environmental Management

MOB614 (16 credits) - Water Resource Management

Introduction to the principles and protocols of aquatic resource management, which relate mainly to the functional ecology of water bodies. Stress will be laid on biomonitoring protocols related to the national River Health Programme. Biological indices of water quality will be covered. The identification and ecology of mainly animal communities in rivers, lakes and temporary waters will be examined. This is a practical and tutorial-based course, which may be presented as a short block of intensive study.

The class will be required to attend tutorials and practicals for which preparation will be necessary.

Assessment via practical work, one written assignment, one oral assignment, and one three hour examination.

Genetics

GEN686 (24 credits) - Research Techniques

Two days per week for the first semester.

An oral examination will be undertaken on completion of the module.

Lectures and practicals on selected techniques and competencies as applied in genetics. On completion of this module the student should have the necessary skills to apply certain laboratory techniques.

GEN614 (16 credits) - Cytogenetics

Class discussion for three hours and a six-hour practical per week.

One examination paper of three hours.

Cytotaxonomy, chromosome numbers, chromosome morphology, meiotic chromosome behaviour, hybrid swarms, structural chromosome evolution, numeric chromosome evolution, phylogeny, *in situ* hybridization.

After the successful completion of the module, the student should be able to plan and execute a cytotaxonomic study and analyse the results.

GEN624 (16 credits) - Plant improvement

Full time one week during the second quarter.

One exam paper of three hours.

Overview of floriculture in South Africa, determination of breeding objectives, planning of a breeding program, importance of cytogenetic studies in breeding, mutation breeding, storage and fertility of pollen, incompatibility, selection methods, recording of breeding programs, cultivar registration and breeder's rights, disease resistance, gene banks.

After the successful completion of the module, the student should be able to plan and execute a breeding program for several flower varieties, and should know the bottlenecks of the industry.

GEN634 (16 credits) - Behavioural Genetics

Class discussion for three hours and a six-hour practical per week.

One examination paper of four hours.

Determination of the inheritance of behaviour; monogenic vs. polygenic inheritance; allelism, pleiotropy, epistasis; twin studies; pedigrees; experimental design; gene frequencies in populations.

After the successful completion of the module, the student should be able to plan and execute a behavioural genetic study, identify factors influencing behaviour, and determine the influence of inheritance on behaviour.

GEN644 (16 credits) - Molecular systematics

Class discussion for three hours and a six-hour practical per week.

One examination paper of three hours.

Genomes, nucleotide sequencing, mutation rates, cladistics, the use of molecular data for determining phylogenetic relationships and parenthood, species identification, computer programs used in molecular analyses: PAUP, CLUSTAL W/G and MacClade. After the successful completion of the module, the student should be able to plan and execute molecular studies and analyse the results.

GEN654 (16 credits) - Molecular ecology

Three hour lecture and a six-hour practicum per day for one week (First semester).

One exam paper of three hours and a written report that will contribute 20% of your final mark.

The emphasis of this course is how to interpret results generated by DNA markers by using various relevant computer programmes such as, Poppgene, GeneClass, Population and Treeview. Population genetics concepts, maintenance of genetic diversity and effects of population size reduction will be discussed.

After completing the module successfully, the student should

- a) be able to analyse molecular data with various computer programmes,
- b) implement molecular data results in such a way that it can contribute to the conservation of biodiversity,
- c) understand the contribution of genetics to conservation and ecology.

GEN664 (16 credits) - Forensic DNA typing

Three hour lecture and a six hour practical per week.

One examination paper of three hours.

After the completion of this module, a student will be familiar with the sampling and handling of DNA evidence, without disrupting the chain of custody. Various methods of DNA extractors, pipeting, real-time PCR techniques, as well as the maintenance and loading of samples on the ABI3100 and/or ABI377 and the analysis of DNA profiles using GeneScan, Genotyper and GeneMapper software will be discussed. Assignments form an integral part of the module, both for the theory and the practical work. Developing skills in pipeting, PCR, loading and maintenance of the ABI377 and/or ABI3100. Analyzing the interpreting DNA profiles with GeneScan and Genotyper software.

GEN674 (16 credits) - *Capita Selecta* Genetics

Three hour lecture and a six hour practical per week.

One examination paper of three hours.

Capita Selecta from advanced aspects of Genetics with a view to the expansion of knowledge of the subject in the educational situation. Assignments form an integral part of the module, both for the theory and the practical work.

GEN692 (32 credits) - Research essay

This course stretches over the whole year and involves a research project under the guidance of a lecturer. The project is selected in consultation with the division head. The results of the project must be submitted in the form of a typed scientific paper for examination. An oral presentation of 15 minutes with 5 minutes for questions on the research project is required.

After the successful completion of the module, the student should be skilled in problem identification, hypothesis formulation, planning, conducting and analysis of experiments as well as the interpretation and communication of results.

GEN693 (16 credits) - Research: Literature study

A review paper is written and presented orally on a date determined by the division head.

The subject of the dissertation should differ from that of the research project and is selected in consultation with the division head. On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.

MGB604 (16 credits) - Diagnostic molecular biology

See Department of Haematology and Cell Biology (Faculty of Health Sciences).

PWS674 (16 credits) - Plant transformation

Class discussion for three hours and a six-hour practical per week during the second quarter.

One exam paper of three hours.

During the course, the latest developments in plant transformation will be discussed: vectors used for transformation, selectable marker genes, screenable marker genes, promoter regions, *Agrobacterium* mediated transformation, particle bombardment, electroporation, overexpression and antisense technology, the analysis of transgenic plants, the uses and applications of gene transfer to plants.

After the successful completion of the course, the student should understand the general concepts of transformation, should be able to describe each individual protocol and also be able to discuss the relevance of this technology in certain research articles.

XXX000 - Advanced specialized course

A combination of advanced courses in Genetics or a honours course from an appropriate discipline, which would be a meaningful supplement to the student's field of study.

Limnology

PWS614 (16 credits) - Research techniques

Full time lectures and practicals for the first three weeks of the honours study.

An oral examination will be undertaken on completion of the module.

Lectures and practical sessions pertinent to techniques and skills.

LIM693 (24 credits) - Research: Literature study

A dissertation must be written of a specific subject and delivers a presentation on the topic.

On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.

LIM692 (32 credits) - Research essay

Research project stretches over the whole year.

An oral presentation and a project report are required.

The student completes a research project under the guidance of a supervisor and is acquainted with problem identification, hypothesis formulation, planning, conducting and analysis of experiments as well as the interpretation and communication of results.

PLK654 (16 credits) - Limnobotany

See Plant Sciences

MOB614 (16 credits) - Water Resource Management

See Environmental Management

DRK674 (16 credits) - Aquatic Parasitology

See Zoology

DRK622 (8 credits) - Quantitative Ecology

This module will be jointly presented by lecturers of Zoology & Entomology and Environmental Management and upon completion students will be familiar with the measurement of the biotic components of an ecosystem. Evaluation on written and oral tasks.

DRK642 (8 credits) - The Environment

This module will be jointly presented by lecturers of Zoology & Entomology and Environmental Management and will familiarize students in the latest developments regarding environmental sustainability and the role of man in this regard. Evaluation on written and oral tasks.

GIS616 (24 credits) - Geographical Information Systems (Intermediate)

See Geography

PLK614 (16 credits) - Plant ecology

See Plant Sciences

LIM694 (16 credits) - Advanced specialized module

A combination of advanced modules or subjects from [Botany or] a honours module from an appropriate discipline, which would be a meaningful supplement to the student's field of study.

Microbiology

MKB614 (16 credits) - Advanced techniques in Biotechnology

Research techniques in Biotechnology: handling and preservation of micro-organisms, serological techniques, chromatographic, spectroscopic and other analytical techniques for the analysis of organic compounds.

MKB634 (16 credits) - Microbial diversity

Yeasts: Identification of yeasts as required for quality assurance in the brewing and wine industry. Yeast taxonomy.

Fungi: Ecological concepts in mycology, endophytes, ecological succession, mating types and vegetative compatibility. Taxonomy, collection, preservation and description of fungi. Mycological techniques and the use of identification keys.

Bacteria: Bacterial nomenclature and classification. Numerical taxonomy. Serology and chemotaxonomy. Nucleic acids in bacterial classification. Putative taxa of prokaryotes. Polyphasic taxonomy. Chemical ecology.

Viruses: Practical aspects of the propagation of viruses and the use of PCR for the identification of viruses.

MKB654 (16 credits) - Applied microbial physiology

Bioremediation: Basic soil- and other concepts relevant to environmental pollution. Principles of colloidal chemistry. Effect of physical-chemical properties and structure of pollution on bio-degradation and bioremediation. Environmental effects on biodegradation and bioremediation. Biodegradation of petroleum hydrocarbons. Tools used to monitor biodegradation. Microbiological aspects of bioremediation.

Food Microbiology: Physiology of food spoilage microorganisms. The application of microorganisms in biological control. Food spoilage and its prevention. Mycotoxins. The application of microorganisms in food processing.

Microbial product formation: Principles and application of fermentative metabolism. Metabolic regulation and its implication for microbial product formation. Industrial processes based on microbial physiological activities.

MKB674 (16 credits) - Advanced molecular biology

Training in the reading and interpretation of publications in molecular biology and the presentation of a seminar on a current molecular biology topic. The use of advanced molecular biology techniques as well as training in computer usage that are associated with the analysis of DNA

information. Students will also be expected to do self-study on selected topics that are related to molecular biology.

MKB622 (8 credits) - Oral examination in theory and practicals

The oral examination is taken in November. A panel consisting of lecturers of the Department of Microbiology and Biochemistry and which includes an external examiner, is constituted for this purpose. Students are expected to answer questions about microbiology in general and evaluation is not limited to completed course contents.

MKB626 (24 credits) - Seminar

Students conduct literature research on a topic supplied in the first semester by a lecturer who serves as their mentor. A literature report is written on the topic, which is also presented orally. The mentor as well as the external examiner for the module evaluate the written report and both allocate marks as will be explained to students.

MKB628 (32 credits) - Research project

Students complete a research project on a topic supplied in the first semester by a lecturer who serves as their mentor, in collaboration with the Departmental Chair. Students write a report on their results and also present their work as an oral presentation. The mentor as well as the external examiner for the module evaluates the written report and both allocate marks as will be explained to students.

BTG614 (16 credits) - Bioprocess technology

Material and energy balances; mixing and fluid rheology in submerged cultures; mass and heat transfer in bioreactors; determination of oxygen transfer rate and $k_L a$; modeling of bioprocesses.

BTG634 (16 credits) - Continuous and batch cultivation of microorganisms

Growth kinetics of batch cultures. Oxygen as substrate: volumetric oxygen transfer coefficient; critical dissolved oxygen concentration. Chemostat theory: material balances; Monod model; autoregulation; determination of kinetic and stoichiometric parameters. Deviations from the Monod model: maintenance energy; double substrate-limited growth; growth on mixtures of carbon substrates. Effect of growth rate on cell composition and size. Product formation: kinetics; effect of environmental factors. Complex chemostat systems and applications. Kinetics of fed-batch cultures. Degree of reduction and carbon balances.

Plant Health

PWS614 (16 credits) - Research techniques

Lectures and practical sessions pertinent to techniques and skills in plant biology are conducted. On completion of the module the student will have the knowledge to perform certain techniques and laboratory skills used in plant biology.

PPG693 (24 credits) - Research: Literature study

The student compiles a review of a specific subject and delivers presentations of selected articles in plant pathology journals. On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.

PPG692 (32 credits) - Research essay

The student completes a research project under the guidance of a supervisor and becomes skilled in problem identification, hypothesis formulation, planning, conducting and analysis of experiments as well as the interpretation and communication of results.

PPG614 (16 credits) - Ecology and biology of disease organisms

On completion of this module the student is acquainted with the various disease causing organisms on plants. Their role in the environment and biological cycles, including infection, reproduction, dispersal and survival of fungi, bacteria and viruses will receive special attention.

PLK614 (16 credits) - Plant ecology

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

The nature of quantitative plant ecology and vegetation science, the description of vegetation in the field, the nature and properties of vegetation data, basic statistical analysis of vegetation and environmental data, ordination methods, phytosociology and the Zürich-Montpellier school of subjective classification, numerical classification and phytosociology, computer programs for vegetation and environmental data, quantitative plant ecology, vegetation science and the future, applications in the South African situation. After the successful completion of the module the student should be able to manage some vegetation analysis techniques as well as some data managing techniques applicable to plant ecology.

PLK664 (16 credits) - Plant diversity and taxonomy of higher plants

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

Nomenclature, plant structure and taxonomy, floral diversity and pollinators, origin and classification of the angiosperms, sources of taxonomic evidence, cladistics and herbarium management. On completion of the module a student will be able to identify and classify flowering plants, have a working knowledge of taxonomic literature, be able to apply basic taxonomic principles in the description and nomenclature of plant species, be familiar with the functioning, basic management and use of the herbarium.

ENT654 (16 credits) - Insect - Plant Interactions

Upon completion of this module students will be familiar with the close association that exists between plant-feeding insects and their host plants. Knowledge of this has a strong application value in investigations where natural vegetation and cultivated plants are concerned.

Plant Molecular Biology

PWS614 (16 credits) - Research techniques

Full day lectures and practicals for the first three weeks of the honours study.

An oral examination will be undertaken on completion of the module.

Lectures and practical sessions pertinent to techniques and skills in plant biology are conducted.

After completion of the module the student will have the knowledge to perform certain techniques and laboratory skills used in plant biology.

PLK693 (24 credits) - Research: Literature study

The student compiles a review of a specific subject and delivers a presentation on the topic.

On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.

PLK692 (32 credits) - Research essay

Research project stretches over the whole year.

An oral presentation and a project report are required

The student completes a research project under the guidance of a supervisor.

On completion of this module the student is acquainted with problem identification, hypothesis formulation, planning, conducting and analysis of experiments as well as the interpretation and communication of results.

PLK624 (16 credits) - Plant physiology I (Metabolism and growth)

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

1. Mitochondrial electron transport in plants: - cyanide sensitive electron transport, alternative oxidase pathway, rotenone non-sensitive complex, exogenous NADH oxidase pathway and oxidative phosphorylation.
2. Secondary metabolism related to lipid mobilization in plants.
3. Hydroponics as an alternative plant cultivation and research technique: - systems, importance of different nutrient media, sterilization, pH, conductivity, pest control, etc. Hydroponics versus organic versus conventional cultivation practices.

After completion of the module the student will be able to do research related to respiratory and lipid metabolism in plants. Furthermore, the student will be able to cultivate plants hydroponically and apply hydroponics as a research technique in plant physiology.

PLK644 (16 credits) - Plant physiology II (Plant defence and applications)

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

The plant's defence mechanisms in relation to biotic stress factors such as injury, insects and pathogens. Resistance and susceptibility are explained in terms of defence mechanisms. Constitutive versus induced defence mechanisms, eliciting and signal transduction mechanisms, secondary defence reactions, plant activators, manipulation of resistance, relation to new alternative, but very exciting, uses of plants.

After completion of the module the student should be able to get innovatively involved in the manipulation of resistance in plants.

XXX000 - Advanced specialized module

A combination of advanced modules or subjects from Botany or a honours module from an appropriate discipline, which would be a meaningful supplement to the student's field of study.

PWS634 (16 credits) - Plant molecular applications

A three hour discussion and equivalent of a six hour practical per week.

One examination paper of three hours.

Immunological characterization of plant gene products, the analysis of gene expression on both single and multiple gene level by using Southern and Northern blots, RT-PCR, antisense technology, DNA micro and macro arrays, expressed sequence tags (ESTs), serial analysis of gene expression (SAGE), 2-D protein gel analysis, protein-protein interaction using yeast two-hybrid analysis.

After the successful completion of the module, the student should be able to characterize plant proteins using the relevant immunological techniques and be able to determine the expression of plant genes under different growth conditions.

PWS674 - Plant transformation

Class discussion for three hours and a six-hour practical per week during the second quarter.

One exam paper of three hours.

During the course, the latest developments in plant transformation will be discussed: vectors used for transformation, selectable marker genes, screenable marker genes, promoter regions, *Agrobacterium* mediated transformation, particle bombardment, electroporation, overexpression and antisense technology, the analysis of transgenic plants, the uses and applications of gene transfer to plants.

After the successful completion of the course, the student should understand the general concepts of transformation, should be able to describe each individual protocol and also be able to discuss the relevance of this technology in certain research articles.

Statistics

GHR628 (32 credits) - Statistical Analyses

Matrix computations. Multiple regression and correlation. Variance analysis. Time series. Markov models. Simulation models of hydrological data. Practical work.

Zoology

DRK614 (16 credits) - Research Techniques, Scientific Methodology and Scientific Communication

After completion of this module the student will be familiar with selected techniques applicable in Zoology, as well as accessing scientific literature, organizing and evaluating scientific information, compilation of information according to scientific standards and format, and written and oral scientific communication skills.

DRK622 (8 credits) - Quantitative Ecology

This module will be jointly presented by lecturers of Zoology & Entomology and Environmental Management and upon completion students will be familiar with the measurement of the biotic components of an ecosystem.

DRK632 (8 credits) - Biodiversity (Evolution & Biogeography)

Upon completion of this module students will be familiar with evolutionary change as the cornerstone of biological sciences.

DRK642 (8 credits) - The Environment

This module will be jointly presented by lecturers of Zoology & Entomology and Environmental Management and will familiarize students in the latest developments regarding environmental sustainability and the role of man in this regard.

DRK654 (16 credits) - Veterinary Ectoparasitology

The course focuses on the occurrence, biology and control of selected ectoparasites associated with domesticated animals and pets. Specific attention will be given to the role of these ectoparasites in the transmission of pathogens to the animal hosts and humans. The course included both theoretical and practical components.

This course will contribute to the student's ability to following a career in research, developing and marketing divisions of pharmaceutical companies. It could further contribute to the ability of a student to become involved in contract research.

DRK664 (16 credits) - Animal Behaviour / Veterinary Endoparasitology

Animal Behaviour: A holistic approach is followed in order to understand and explain vertebrate animal behaviour under natural conditions. Attention is given to the basic principles of ethology, ecology and evolution. A sound knowledge of behavioural studies prepares students for a career in nature conservation, agriculture, academic institutions and for consulting work.

Veterinary Endoparasitology: The course focuses on training the students in aspects of biology, epidemiology, diagnosis, treatment and control of veterinary important helminthes, protozoa and rickettsia parasites, as well as zoonoses of economical importance in South Africa. The practical aspects of this course include laboratory diagnostics and molecular parasitological techniques.

DRK674 (16 credits) - Aquatic Parasitology / Wetland ecology

Aquatic Parasitology: This course deals with water borne parasites, which spend at least a part of their lifecycle in water. It includes taxonomy, ecology, pathology, parasite host associations, epizootiology and control of parasites.

Wetland Ecology: The course will include the following topics: Wetlands in southern Africa, chemical and physical conditions in wetlands, biotic community of wetlands, wetlands as biological filters, threats to wetlands, production and productivity, as well as wetlands in arid environments.

DRK684 (16 credits) - African Ornithology / Immunology

African Ornithology: A comprehensive course dealing with the occurrence, distribution and behaviour of birds in an African context. Special attention will be given to factors regulating distribution and behaviour of birds. The course is a valuable addition to an ecological background, forming the basis for a wide spectrum of disciplines.

Immunology: The course focuses on aspects of innate and specific immunology, and cell mediated and humoral immunity. It also includes antibody structure, biological characteristics of immunoglobulins, transfusion-immunology and immunological aspects of HIV-Aids. The practical aspects include an introduction to serological testing, immuno-diagnostics and immunological research techniques.

DRK692 (32 credits) - Research essay

The research project extends over the whole year.

An oral examination and project report is required.

The student completes a project under the supervision of a supervisor and is introduced to problem identification, hypothesizing, planning, executing, analyzing, interpreting and communication of results. The independence and scientific insight that is developed here provides opportunities for further post-graduate studies.

XXX000 - Advanced related module

This module is selected from an applicable course outside Zoology and offers the opportunity for a sensible supplement to the field of study of the student.

POSTGRADUATE PROGRAMMES IN AGRICULTURE

In addition to the degrees and diplomas the University might institute in future, the following degrees can be conferred in the Faculty:

Degree	Minimum study period	Abbreviation
Honours degree		
Baccalaureus Scientiae Agriculturae Honores	1 year	B.Sc.Agric.Hons.
Baccalaureus Agriculturae Honores	1 year	B.Agric.Hons.
Master's degrees		
Magister Scientiae in Agriculture	1 year	M.Sc.Agric.
Magister in Sustainable Agriculture	2 years	M.S.A.
Magister Agriculturae	1 year	M.Agric.
Magister in Disaster Management	2 years	M.Disaster Management
Doctor's degrees		
Philosophiae Doctor	2 years	Ph.D.
Doctor Scientiae	See regulations	D.Sc.

The B.Sc.Agric.Hons. degree can be obtained in the following fields of study:

Agricultural Economics, Agrometeorology, Agronomy, Animal Science, Food Science, Grassland Science, Horticulture, Irrigation Science, Plant Breeding, Plant Pathology and Soil Science,

The B.Agric.Hons. degree can be obtained in the following interdisciplinary fields of study:

Irrigation Management, which is co-ordinated by the Department of Soil, Crop and Climatic Sciences, Agricultural Management, which is co-ordinated by the Department of Agricultural Economics and Wildlife Management which is co-ordinated by the Department of Animal, Wildlife and Grassland Sciences.

Honours degrees

BACCALAUREUS SCIENTIAE AGRICULTURAE HONORES

B.Sc.Agric.Hons.

INFORMATION

STUDY AIMS

The objectives of the study for this degree are:

- (a) to deepen and extend the student's knowledge in subjects of their choice in the context of research and extension;
- (b) to prepare the student for further post-graduate study;
- (c) to develop independent study capability in the student;
- (d) to train the student how to collect, compile, collate, interpret and report subject literature and the effective communication thereof.

Module codes

The meaning of the numerical part of the module code for the honours degree modules differs from that of undergraduate module codes. The alphabetical part specifies the subject name. The number 6 typify it as an honours degree, while the second and third digits are exclusive to the specific subject. The time of examination in any specific module must therefore be determined in consultation with the head of the department concerned. If, however, the second digit is a 9, it refers to a seminar/short dissertation/essay/assignment.

REGULATIONS

Nota Bene: The general regulations for honours degrees (General Regulations A55 to A78) are *mutatis mutandis* applicable to this faculty.

Reg. H14 - Admission

- (a) See General Regulation A56.
- (b) Acceptance to the Honours degree study is subject to permission from the Departmental Chairperson.
- (b) Acceptance to the Honours degree study is subject to permission from the Departmental Chairperson.
- (c) A deserving student in possession of a B.Sc. degree with the required major subjects may be permitted by the Departmental Chairperson and with the recommendation of the Dean, to receive post-graduate training in Agriculture. Such a student registers for B.Sc.Agric.Hons., during which prescribed honours modules as well as certain additional undergraduate Agriculture modules may be taken in consultation with the Departmental Chairperson.
- (d) Main subjects Agronomy, Agrometeorology, Grassland Science, Horticulture and Soil Science lead to, not only the post-graduate study of the concerned main subject, but also the inter-departmental study of Irrigation Science.
- (e) Deserving students that obtained a B.Agric. degree according to the Regulations of the 2000 or following Calendars, may be allowed by the Faculty Committee, to register for a B.Sc.Agric.Hons. degree, that will be done over a period of 2 years. During this period the final

year B.Sc.Agric. major modules for which the student qualifies, plus the prescribed honours modules must be presented in consultation with the Departmental Chairperson.

Reg. H15 - Semester and year marks and pass requirements

- (a) See General Regulation A65.
- (b) No semester mark/year mark is required for admission to examination in Honours modules in this faculty.

Reg. H16 - Compulsory modules

In addition to the stipulations of the General Regulations A56(b) a student must also provide proof of successful completion of the following Agriculture Datametrics modules, DMT214 and DMT224, before receiving the degree, providing that:

- (a) students who passed the modules BMT218 and BMT228 in 1987 or earlier, be exempted; and
- (b) that students who have applicable modules in Mathematical Statistics and/or Computer Usage or who took Agricultural Economics as major subject, may be exempted by the Dean.

Reg. H17 - Curricula for the degree B.Sc.Agric.Hons.

Nota Bene: Modules must be chosen in consultation with the particular Departmental Chairperson.

(a) AGRICULTURAL ECONOMICS - B.Sc.Agric.Hons. - Study code 5517 (120 credits)

This degree is awarded in the fields of agricultural financing and derivative markets, agricultural policy and development, agricultural marketing and international trade, resource and environment economics, farm management or food and agribusiness management. To meet the requirements of the degree it is expected of a student to pass **eight** modules of which LEK601 is compulsory. The student must choose a field and successfully complete the three prescribed modules plus four other honours modules.

- Agricultural financing and derivative markets: LEK605, ECO621, ECO724 plus four other postgraduate modules
- Agricultural policy and development LEK606, LEK607, LEK608 plus four other postgraduate modules
- Agricultural marketing and international trade LEK607, LEK609, ECO724 plus four other postgraduate modules
- Resource and environmental economics LEK608, LEK610, LEK611 plus four other postgraduate modules
- Farm management LEK609, LEK612, LEK605 plus four other postgraduate modules
- Food and agribusiness management AGB605, AGB704, LEK609 plus four other postgraduate modules

One of these elective modules may be replaced by an appropriate Honours module from another discipline in consultation with the Departmental Chairperson. An examination paper of three hours must be answered in each of these modules. Apart from the written paper an oral examination is to be taken for LEK612.

Module code	Credits	Subject
LEK601	15	Quantitative techniques

The learner will be competent in demonstrating knowledge about microeconomic concepts, market structures, and concentration in the South African economy.

LEK602	15	Production and consumer economics The student should be able to estimate and use empirical functions, apply empirical cost & profit functions, duality of cost and profit functions, get the data ready for analysis, handle the implications of functional form for econometric results, do econometric tests for functional form. Study functional form and model specification. Use production models in the study of environmental/health concerns. Study primal production function estimation and the review of production economics concepts.
LEK603	15	Operational research The primary learning outcome of this course is to build the capacity of the student to synthesize information regarding complex agricultural problems, to represent these problems mathematically within a linear, mixed integer, dynamic linear or a risk programming framework as appropriate, to solve these problems using the General Algebraic Modelling System (GAMS) and to interpret the results. To build the capacity of the student to represent a specific problem using mathematical notation specific to the GAMS modelling language , solve the model and interpret the results for various problem sets
LEK604	15	Agricultural econometrics After completion of this course, the student will be able to apply econometric techniques in empirical academic work and will be able to critically evaluate the works of others which make use of econometric tools.
LEK605	15	Agricultural financing After completion of this module, the student will be able to critically analyze and independently evaluate an agribusiness's financial position, and propose recommendations on the growth and protection of equity capital in a risky macroeconomic environment.
LEK606	15	Agricultural policy After completion of this course the student should understand the agricultural policy process and have a good theoretical knowledge about agricultural policy; know the South African agricultural policy and have a thorough understanding of it; be able to evaluate agricultural policy by using different methods; and be able to evaluate the effect of agricultural policy on agricultural development

LEK607	15	<p>International agricultural trade After completion of this learning program the student will have the necessary knowledge base, a deep understanding of the complexities of international trade and have the skills to analyse international trade independently.</p>
LEK608	15	<p>Agricultural development Using the theoretical and empirical knowledge gained from the unit, students will be able to analyse agricultural households, rural markets and institutions, evaluate the ability of alternative policies to engender agricultural and economic development based on their understanding of how agricultural households and rural organisations and institutions function.</p>
LEK609	15	<p>Agricultural marketing and price analysis After completion of this learning program the student will have the necessary knowledge base, a deep understanding of the complexities of marketing agricultural products and have the skills to do compile an all encompassing marketing plan.</p>
LEK610	15	<p>Advanced resource and environmental economics With an understanding of the theory of environmental and natural resource economics learners will be able understand concept of value as it applies to these resource and the role the importance of economic values in guiding resource allocation and management. Students will gain an understanding of valuation techniques such as the travel cost method, hedonic price methods and contingent valuation, and the capacity to use these techniques to determine the benefits to society from different natural resource management and environmental improvement policies and programs.</p>
LEK611	15	<p>Project planning and analysis The objectives of this unit are to introduce learners to the principles of project design, planning and management, project design concepts and methods that effectively link projects to rural and economic development strategies</p>
LEK612	15	<p>Advanced agricultural management The overall learning outcome of this module is to develop a computer model on a spreadsheet which will be used to do a whole-farm planning for a farming - or agribusiness.</p>
AGB604	15	<p>Technology management: Value adding Agriculture does not provide food, but the raw materials that can be processed into food products. In this course the general processing methods of plant materials and animal products are studied in five themes. In each of the 5 themes, the general processing methods are studied, as well as specialized processes for specific products. The student gets insight regarding the quality, legislation, labeling, nutrition and marketing of the processed product, and to become conversant with the nature and composition of the raw, unprocessed food products and the range of processing techniques whereby raw</p>

materials of food are converted into end products. The aim of the course is not to become a full fledged food scientist, but to obtain the necessary knowledge needed for the important decisions to be made in the sustainability of an agricultural institution, be it economically or for specialisation of production.

AGB605	15	Agribusiness management The overall learning outcome of this module is to obtain a comprehensive knowledge of strategic management principles and methods for production, processing, wholesaling, retailing and service forms in the context of the markets of these firms, thus across specialised areas in agriculture.
ECO621	15	Financial systems and monetary policy The objectives of this unit are: <ul style="list-style-type: none">▪ interest rate behaviour: the determination of the interest rate level, the risk and terms structure of interest rates;▪ the interaction between the Reserve Bank and the financial markets: the monetary transmission mechanism, the South African monetary system, monetary policy and interest rates;▪ the interaction between domestic and international financial markets; and▪ financial institutions and markets
ECO724	15	Derivative instruments The objectives of this unit are <ul style="list-style-type: none">▪ Futures contracts and markets The nature and origin of financial futures markets and contracts; the role of liquidity in the functioning of futures markets; the different market participants, the importance of clearing houses and the various futures contracts▪ Price determination Hedging and hedging strategies; arbitrage and speculation; the link between spot and futures markets; the South African futures market; options and option markets; the nature and functioning of option markets; pricing of options and determinants of value; possibilities for applying options; arbitrage and speculation; types of options; the South African option market; the nature and functioning of swaps.

(b) AGRONOMY - B.Sc.Agric.Hons. - Study Code 5515 (120 credits)

This degree is awarded in the fields of crop production, vegetable production or fruit production. To meet the requirements of the degree a student must pass the following modules: AGR615, AGR625, AGR635, AGR645, AGR693 and AGR695 for crop production; AGR615, AGR635, HRT625, HRT645, HRT693 and HRT695 for vegetable production; AGR615, AGR635, HRT625, HRT665, HRT693 and HRT695 for fruit production. One of the modules, except AGR693, AGR695, HRT693 and HRT695, may be replaced by an appropriate honours module from another discipline, in consultation with the Departmental Chairperson. An examination paper of three hours must be answered in each of AGR615, AGR625, AGR635, AGR645, HRT625, HRT645 and HRT665.

Module code	Credits	Subject
AGR615	20	Crop and stress physiology On completion of this module students will have developed their critical reading skills, and will be able to relate stress symptoms in crops with physiological and biochemical mechanisms. In the crop physiology section students will develop a high level of understanding of the physiological principles of dry land crop production, as well as the possibilities of manipulating the physiological and biochemical processes to improve yields. The stress physiology part of the module will enable students to understand the effects of climate change on food production, and gain a deeper understanding of how plants react to various stresses imposed by the environment and production practices.
AGR625	20	Plant nutrition In this module the student is familiarised with classification systems of plant nutrients. The student will acquire knowledge and insight of selected plant nutrients on their supply, uptake and physiological functions in crop manipulation. Nutrient requirements, of crops, value and interpretation of plant and soil analyses, application of nutrients through inorganic and organic fertilisation is part of the holistic approach to plant nutrition. On completion of this module the student will be able to successfully compile and evaluate a crop fertiliser program.
AGR635	20	Plant-water relations On completion of this module students will have acquired sound knowledge of the soil-plant-atmosphere continuum, root growth and water uptake, the movement of water in plants, measurements of the plant water status, and plant response to water deficit and water logged conditions. Each student is required to prepare and present an assignment on the water requirements of a selected crop by using relevant literature.
AGR645	20	Weed control After completion of this module students will have advanced knowledge of various aspects of weed control, including different herbicides and their modes of action, application methods, allelopathy and its use in weed control, the development of herbicide resistance in

weeds and how to prevent it, the registration process to be followed for new herbicides, as well as how to diagnose herbicide problems and conduct experiments to confirm the diagnosis. This module expands the student's knowledge of weed control, mainly through self study. It is expected that the student identify any shortcomings in his or her knowledge base and rectify these.

AGR693	20	Research project Students will conduct a research project on an aspect of agronomy under the guidance of a supervisor. At the end of the second semester students will be required to submit the results of this research in the form of a scientific paper, and will be expected to prepare and present the results in the form required by scientific conferences. During this project skills in problem identification, hypothesis formulation, planning, conducting and analysis of agronomic experiments, as well as the interpretation and communication of results in both written and oral form will be developed by the students.
AGR695	20	Literature review Students develop skills and knowledge on scientific writing for publication through the preparation of a comprehensive literature review linked to their research project. This study will be written up and presented in the form of a seminar at the end of the first semester. Students should become familiar with the scientific style of writing, as well as being well acquainted with the resources available and skills required for literature searches, as well as being able to combine relevant sources in a meaningful manner. Valuable experience will also be gained in public presentation.
HRT625	20	Plant propagation On completion of this module students will be familiar with the sexual and asexual propagation of horticultural crops: The following aspects are dealt with at an advanced level: seedling propagation; theoretical aspects of vegetative propagation by budding, grafting, cuttings, layering and specialised plant structures; rootstock and scion relationships and principles of tissue culture for micro propagation.
HRT645	20	Vegetable production On completion of this module students will be familiar with vegetable production. The following aspects are dealt with at an advanced level: establishment; induction of flowering; environmental influences on development, growth and yield; correlative growth and the production aspects of the major leaf, bulb, root and fruit vegetable crops.
HRT665	20	Fruit production This module consists mainly of self-study of scientific review articles on specific advanced topics in fruit production. After completion of this module, students will have acquired an in-depth knowledge of important concepts in fruit production, including flowering and dormancy, fruit development, and fruit tree manipulation. Experience in evaluating scientific literature and extracting relevant information from such sources will also be gained.

HRT693	20	<p>Research project</p> <p>The research project extends over a whole year. A subject specific project will be completed under supervision. They will be introduced to problem identification, hypothesis formulation, planning, conducting and analysis of horticultural experiments, as well as the interpretation and communication of results. Students will be required to submit a scientific research report and make an oral presentation on the project results by the end of the second semester. After completion of this module, skills of scientific insight and procedure, as well as written and oral presentation skills of scientific information will have been developed.</p>
HRT695	20	<p>Literature review</p> <p>Students will prepare a comprehensive, scientific literature review linked to their research project and present this seminar by the end of the first semester. On successful completion of this module students should have an understanding of the importance of a comprehensive literature survey in research, and be completely familiar with the scientific style of writing. Students should be well acquainted with the resources available and skills of literature searches, and the combination of relevant sources into a meaningful union. Students will also gain valuable experience in presentation of scientific matter in front of an audience.</p>

(c) AGROMETEOROLOGY - B.Sc.Agric.Hons. - Study Code 5518 (120 credits)

For this degree LWR601, LWR602, LWR693 and LWR695 are compulsory. Another two modules must be selected from LWR603, LWR604, LWR605 and LWR606. One of these elective modules may be replaced by an appropriate honours module from another discipline. The choice of modules must be done in consultation with the Departmental Chairperson. An examination paper of three hours must be answered in each of LWR601, LWR602, LWR603, LWR604, LWR605 and LWR606. No official examination is written in LWR693 and LWR695.

Module code	Credits	Subject
LWR601	20	<p>Agrometeorological services for extension</p> <p>The student will expected to understand the various communication channels and methods of technology transfer with specific emphasis on weather bulletins and advisories (for the whole range of temporal and spatial scales) for use by farmers, extension officers and policy makers. They will also learn how to conduct a participatory needs assessment survey to determine end-user needs, and how to develop new products from available forecasts and information obtained from meteorologists or climatologists.</p>
LWR602	20	<p>Data analysis for weather and climate research</p> <p>Upon completion of this module students will be able to apply basic statistical procedures to weather and climate data sets, and to do time series analysis, analysis of multivariate data sets, statistical weather forecasting for all time scales and forecast verification.</p>
LWR603	20	<p>Specialised instrumentation</p>

After completion of this module students will be able to discuss the history, nature operation and use of agrometeorological instruments. The goal is to provide students with the background, knowledge and analytical skills to test, calibrate and evaluate agrometeorological instruments. Students will obtain hands-on experience with instruments where possible.

LWR604	20	Boundary layer meteorology After completion of this module students will be able to measure and describe the radiation, temperature, humidity, wind, turbulence and profiles of momentum and mass transfer within the atmospheric boundary layer over a diurnal and seasonal cycle. They will also be able to explain the Monin-Obukhov similarity principle and determine the top of the mixing layer and how this may affect pollution transport as well as other applications.
LWR605	20	Applied agrometeorology The outcomes of this module will enable students to identify existing or anticipated problems related to the agrometeorological environment. Knowledge acquired by students will equip them to formulate objectives and methods required to tackle specific problems, given the necessary tools, such as seasonal forecasts, advisory reports, etc. Students will gain practical experience by writing a scientific article through acquisition and analysis of data as well as interpretation of results and drawing conclusions. This provides preparation to enter the workplace, equipped to solve agrometeorological problems and apply this knowledge to real-life situations.
LWR606	20	Weather analysis and forecasting After completion of this module students will be able to decipher meteorological observation codes, interpret thermodynamic diagrams and analyse synoptic weather charts. They will also be able to distinguish between various tropical and extra-tropical synoptic scale weather systems and have an in-depth knowledge of these systems; apply some of the key dynamical meteorology concepts in order to predict the evolution of these synoptic scale weather systems; interpret meteorological satellite and radar imagery; interpret numerous numerical weather prediction (NWP) model fields and prepare short-term weather forecasts.
LWR693	20	Research project The student will gain knowledge on sound research methodology by locating and evaluating relevant literature to write a research proposal. A research project must also be completed by a student through analysis and interpretation of results that are compiled into a report.
LWR695	20	Literature review The student will gain knowledge on scientific writing for publication and receive guidance in preparing and presenting a literature review paper on an approved topic in agrometeorology. This seminar must preferably be presented at a discipline-related conference.

(d) ANIMAL SCIENCE - B.Sc.Agric.Hons. - Study Code 05521 (120 credits)

This degree is awarded in the fields of animal breeding, animal nutrition or animal physiology. To meet the requirements of the degree it is expected of a student to pass six modules, of which VKD693 and VKD695 are compulsory, whereas four other modules have to be successfully completed for each of the three main fields of study:

- Animal Breeding: DTL601, DTL602, DTL603 and one other postgraduate module;
- Animal Nutrition: DVL601, DVL602, DVL603, DVL604 for animal nutrition
- Animal Physiology; DAF601, DAF602, DAF603 plus one other postgraduate module.

One of these elective modules may be replaced by an appropriate honours module from another discipline in consultation with the Departmental Chairperson. An examination paper of three hours must be answered in each of DTL601, DTL602, DAF601, DAF602, DVL601, DVL602 and DVL604. For DTL603, VKD693 and VKD695 scientific reports and oral presentations are required. For DAF603 and DVL603 oral examinations are to be undertaken.

Module code	Credits	Subject
DAF601	20	General Animal Physiology Following completion of this module the student will have indepth knowledge of the physiological functioning of the different systems(e.g. circulatory, respiratory, urinary, digestive system etc.) of the animal body.
DAF602	20	Endocrinology Following completion of this module the student will have insight and understand the mechanisms regulating the endocrine system, its glands and hormones and the relevant control of the most important physiological functions in the body.
DAF603	20	Applied reproduction physiology Following completion of this module the student will understand the application of certain physiological principles tn the manipulation of assisted reproductive techniques in farm animals.
DTL601	20	Fundamental animal breeding After successful completion of this module the student will have an indepth knowledge of the underlying principles of quantitative genetics and the application thereof in the genetic improvement of domesticated livestock.
DTL602	20	Experimental animal breeding After successful completion of this module the student will have a fundamental knowledge of the underlying principles and methodologies (single and multiple trait, maternal, environmental and threshold models) of how accurate genetic predictions could be made using statistical analyses and utilised as selection aids for genetic improvement of domesticated livestock. The role and application of molecular techniques in modern animal breeding will also be discussed.
DTL603	20	Applied animal breeding After successful completion of this module the student will have a fundamental knowledge and insight of selection objectives, selection criteria, genetic parameters thereof and how to construct a

comprehensive breeding plan that will result in genetic improved populations of different livestock species under South African environmental conditions.

DVL601	20	Fundamental animal nutrition Through self study (studying literature and written seminars) the student is familiarized with the concepts of feeds and nutrients (water, carbohydrates, lipids, proteins, minerals and vitamins); digestive systems (monogastric, ruminant and lower digestive tract fermenters), digestion, absorption and metabolism; nutrient deficiencies, toxicity and metabolic disturbances; digestibility of feeds and feed components; techniques for the evaluation of feeds and pastures; protein and energy requirements for monogastric animals, ruminants and lower digestive tract fermenters. The student is provided opportunity to master through self study specific topics and write seminars in scientific style and format.
DVL602	20	Experimental animal nutrition On completion of this module the student will be well acquainted and have an in-depth knowledge regarding the quantitative aspect of nutrition e.g. the quantity of nutrients provided by the feed and secondly the nutrient requirements of various farm animals. Experimental techniques used for the quantification of nutrient utilization and requirements are addressed in-depth.
DVL603	20	Applied ruminant nutrition On completion of this module the student will have a valid knowledge and in-depth insight regarding feeding management of dairy cattle, dairy calves, beef cattle and sheep in different physiological stadiums to produce economical high quality animal products under specific environmental conditions.
DVL604	20	Applied monogastric nutrition On completion of this module the student will be well acquainted and have an in-depth knowledge regarding feeding requirements, feed facilities, feeding systems, diet formulation and feeding management of poultry and pigs at different physiological stadiums to ensure the production of economical high quality animal products.
VKD693	20	Research project A subject specific project will be completed under the guidance of a supervisor and will be introduced to problem identification, hypothesis formulation, planning, conducting and analysis of animal science experiments/research, as well as the interpretation and communication of results. It is expected of students to submit a scientific research report in the form of a publication and to prepare and orally present the results in the form required by scientific conferences. The independence and scientific insight developed in this module provides a background for further post-graduate studies.

VKD695	20	<p>Literature review</p> <p>The student prepares a comprehensive scientific literature review on a specific subject and presented it in the form of a seminar and oral presentation on the topic. On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.</p>
---------------	----	---

(e) FOOD SCIENCE - B.Sc.Agric.Hons. - Study Code 5522 (128 credits)

To meet the minimum requirements of the degree it is expected of the student to pass six modules, of which VWS601, VWS 602, VWS693 and VWS695 are compulsory. One of the optional modules below may be exchanged in consultation with the departmental chairman with a applicable honours module from another discipline. Oral exams of three hours each are to be completed in VWS601, VWS602, VWS603, VWS604, VWS605, VWS606 and VWS607. For VWS693 and VWS695 scientific reports/seminars and oral presentations are expected.

Module code	Credits	Subject
VWS601	24	<p>Food microbiology</p> <p>The student will learn to know the following specific areas of food microbiology in 5 modules: food spoilage, food-borne disease and food poisoning, yeasts and yeast-like organisms in food, natural antimicrobial systems and food preservation, probiotics in food and the role of fermentation in food.</p>
VWS602	24	<p>Food chemistry</p> <p>Advanced aspects of food chemistry are covered in 6 modules, dealing with flavourants and flavour perception, new movements in the research and application of sweeteners, role and contribution of lipids and proteins to flavour, modification of functional properties of proteins, and molecular mobility and food stability.</p>
VWS603	24	<p>Dairy Science</p> <p>The course consists of 5 modules on advanced aspects in dairy science. This includes residues in milk and milk products such as residues and contaminants, antimicrobials, paracitocides, pesticides and mycotoxins. Bacteriophages in the cheese industry. Accelerated cheese ripening with enzyme technology. HACCP in the dairy industry. Finally an assignment is required on the latest developments in Dairy Science.</p>
VWS604	24	<p>Meat Science</p> <p>The course consists of six modules dealing with advanced aspects of importance in meat science. The following aspects are covered: composition and structure of muscle, the conversion of muscle to meat and muscle proteins in meat technology, an advanced study of the colour of meat, an advanced study of meat tenderness and the chemistry of meat flavour, restructured meat products and canning of meat and meat products, fermented and intermediate moisture meat products, and new technology for the meat processing industry.</p>

VWS605	24	<p>Foods: General</p> <p>The objective of this course is to provide the student with knowledge of food ingredients in general. This course is divided in six modules. The first module deals with food systems, where the properties and structure of the different food systems are investigated. The second and third modules deal with the functional properties of hydrocolloids; their functions and applications in food. The last three modules investigate the application of fat substitutes, nutritive and non-nutritive sweeteners as well as neutraceuticals and other food additives.</p>
VWS606	24	<p>Fruit, vegetables and seeds</p> <p>This course focuses on the functional, biochemical and quality aspects of fruit and vegetable processing. The course is divided into six modules and allows choices between fruit, vegetables and seeds. The focus is on the determination of quality as well as the influence of processing on quality, investigation of vegetable- and fruit juices and related products, minimal processing of fruit and vegetables, modified atmosphere storage and freezing of fruit and vegetables, the factors influencing the shelf life of fruit and vegetables, and the factors that affect the quality of a variety of economically important cereals, legumes and oil seeds.</p>
VWS607	24	<p>Selected topics in Food Science</p> <p>The course consists of six modules, consisting of choices of two modules from each of the above courses VWS 603, VWS 604 en VWS 606. It is ideal for students who have completed three-year BSc degrees or degrees in Consumer science, where only the basic aspects of Food Science was included in the curriculum.</p>
VWS693	20	<p>Research ptoject</p> <p>Students will carry out under supervision of a study leader a reasearch project on aspects of Food Science. It is expected of the student to hand in a report and prepare the results in the format of a scientific article as would be expected at a scientific congress, and deliver an oral presentation. During the project the student will develop skills in problem identification, hypothesis formulation, planning, carrying out experimental work in Food Science, as well as interpretation and communication of results in both written and oral presentation. The independence and scientific insight developed in this module will provide the student with the necessary background for further postgraduate studies.</p>
VWS695	12	<p>Literature study</p> <p>The student prepares a comprehensive scientific literature review on a specific topic which is presented in the form of a seminar and oral presenation. Agter completion of this module the student will be capable of unlocking literature, organizing information, concluding this information according to a structured format, as well as written and oral communication.</p>

(f) **GRASSLAND SCIENCE – B.Sc.Agric.Hons. – Study Code 5523 (120 credits)**

Four examination papers of three hours each – two in the first semester and two in the second semester in one of the following fields as well as a mini research project (WDK 693) and a literature review (WDL 695) is required. All modules are 20 credits each.

GENERAL FIELD

Module code	Credits	Subject
WDK601	20	Rangeland physiology and ecology To familiarise the student with the principles of grassland science (ecology, physiology and phenology) on advanced level, on which the sustainable utilization and management of the rangeland ecosystem are based.
WDK 602	20	Rangeland management To familiarise the student with the different ways of veld utilization to obtain sustainability, as well as the practical planning of a farming unit in a scientific way.
WDK 603	20	Intensive pasture production The application of veld intensification and the use of planted pastures to improve and supplement the natural veld in order to maintain sustainable productivity.
WDK 604	20	Rangeland evaluation To equip the student with the necessary knowledge on advanced level of the various criteria and techniques that can be used to evaluate the resource, so that the productivity of the ecosystem can be identified and to determine vegetation changes.
WDK 693	20	Research project A subject specific project will be completed under the guidance of a supervisor and will be introduced to problem identification, hypothesis formulation, planning, conducting and analysis of grassland science experiments/research, as well as the interpretation and communication of results. It is expected of students to submit a scientific research report in the form of a publication and to prepare and orally present the results in the form required by scientific conferences. The independence and scientific insight developed in this module provides a background for further post-graduate studies.
WDK 695	20	Literature review The student prepares a comprehensive scientific literature review on a specific subject and presented it in the form of a seminar and oral presentation on a grassland science topic. On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.

WILDLIFE MANAGEMENT

Module code	Credits	Subject
WDK601	20	Rangeland physiology and ecology
WDK 602	20	Rangeland management
WDK 604	20	Rangeland evaluation
WDK 605	20	Wildlife management To enable the student with the aid of basic knowledge on advanced level, of game species such as their social behaviour and feeding preferences, to manage the ecosystem in such a way that optimal production in a sustainable manner can be maintained.
WDK 693	20	Research project
WDK 695	20	Literature review

Any one of the above-mentioned modules can be replaced by an appropriate Honors module from the animal science field, in consultation with the Departmental Chairperson.

(g) PLANT BREEDING - B.Sc.Agric.Hons. - Study Code 5519 (120 credits)

For the Honours course in Plant Breeding PLT693, PLT692 and PWS614 are compulsory, whereas three other modules have to be selected, in consultation with the division head, from PLT614, PLT624, PLT634 and PLT644. An examination paper of three hours must be answered in each of PLT614, PLT624 and PLT634. For PLT644, PLT693 and PLT692 a practical report, oral presentation and a project report are required, respectively. After completion of module PWS614 an oral examination is undertaken.

Module code	Credits	Subject
PLT614	16	Estimates of heritability In this module the student is familiarized with the estimation of genetic variances and co-variances as used to determine heritabilities. The estimates are done for vegetatively propagated, cross-pollinating and self-pollinating species in one and more environments. Hierarchical, factorial and diallel designs are also included. After completion of this module students should have extensive knowledge on estimates of variances and heritability for different plant species and statistical designs.
PLT624	16	Marker-assisted breeding The aim of this module is to expose the student to techniques used for marker-assisted breeding, and application of these techniques in breeding programs. RFLP (restriction fragment length polymorphism), PCR (polymerase chain reaction), RAPD (random amplified polymorphic DNA), AFLP (amplified fragment length polymorphism), SSR (single sequence repeats), SDS-PAGE (sodium dodecyl sulphate polyacrylamide gel electrophoresis), isozymes and HPLC (high per-

formance liquid chromatography) are studied theoretically and carried out in the laboratory. After completing this module the student should be able to apply these techniques in plant breeding.

PLT634	16	Applied Plant Breeding In this module the student acquires knowledge on applications in plant breeding. The student studies breeding for insect and disease resistance, temperature and moisture stress, quality and adaptation in a specific crop. On completion of the module the student should be able to successfully initiate a breeding program for the crop studied.
PLT644	16	Breeding Program Management In this module the student learns how to manage a breeding program by using Agrobase computer software. This includes the design and randomization of trials, compilation of field books, printing of labels, management of nurseries, hybridization, managing segregating and pure breeding generations, and the processing and interpretation of data. On completion of this module the student should be able to manage a breeding program using appropriate computer software.
PLT693	24	Research: Literature study The student compiles a review of a specific subject and delivers a presentation on the topic. On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.
PLT692	32	Research essay The student completes a research project under the guidance of a supervisor and becomes skilled in problem identification, hypothesis formulation, planning, conducting and analysis of experiments as well as the interpretation and communication of results.
PWS614	16	Research techniques Lectures and practical sessions pertinent to techniques and skills in plant biology are conducted.

Any of the abovementioned elective modules may be replaced by a suitable Honours module from another field, in consultation with the division head.

(h) PLANT PATHOLOGY - B.Sc.Agric.Hons. - Study Code 5520 (120 credits)

For the Honors course in Plant Pathology PPG693, PPG692 and PWS614 are compulsory, whereas three other modules have to be selected, in consultation with the division head, from PPG614, PPG624, PPG634 or PPG644. An examination paper of three hours must be written in each of those selected from the latter modules. Continuous assessment takes place in PPG693 and a project report is required for PPG692. After completion of module PWS614 an oral examination is undertaken.

Module code	Credits	Subject
PPG614	16	<p>Ecology and biology of disease organisms</p> <p>On completion of this module the student is acquainted with the various disease causing organisms on plants. Their role in the environment and biological cycles, including infection, reproduction, dispersal and survival of fungi, bacteria and viruses will receive special attention.</p>
PPG624	16	<p>Plant/Pathogen interactions</p> <p>On completion of this module the student is acquainted with critical interactions that take place between plant pathogens, their hosts and the biotic and abiotic environment. The influence of environmental factors and agricultural practices on disease development and the opportunities they present for disease control are dealt with in a holistic context.</p>
PPG634	16	<p>Epidemiology and control of diseases</p> <p>On completion of this module the student is acquainted with the practical assessment of disease and pathogen populations, temporal and spatial aspects of epidemiology, crop losses, and selected subjects relating to selection for disease resistance and chemical control.</p>
PPG644	16	<p>Diagnosis of plant diseases</p> <p>On completion of this module the student is acquainted with advanced diagnostic techniques and methods according to which disease causing organisms are identified. The module includes advanced aspects of fungal, bacterial and viral taxonomy with special emphasis on fungi.</p>
PPG693	24	<p>Research: Literature study</p> <p>The student compiles a review of a specific subject and delivers presentations of selected articles in plant pathology journals. On completion of this module the student is acquainted with literature searches, organizing information, the compilation of information according to a specific format, as well as in written and verbal communication skills.</p>
PPG692	32	<p>Research essay</p> <p>The student completes a research project under the guidance of a supervisor and becomes skilled in problem identification, hypothesis formulation, planning, conducting and analysis of experiments as well as the interpretation and communication of results.</p>
PWS614	16	<p>Research techniques</p> <p>Lectures and practical sessions pertinent to techniques and skills in plant biology are conducted. On completion of the module the student will have the knowledge to perform certain techniques and laboratory skills used in plant biology.</p>

One of the above-mentioned elective modules may be replaced by a suitable Honours module from another field, in consultation with the division head.

(i) **SOIL SCIENCE - B.Sc.Agric.Hons. - Study Code 5516 (120 credits)**

All the modules below are compulsory for this degree. One of the modules, except GKD693 and GKD695, may be replaced by an appropriate honours module from another discipline in consultation with the Departmental Chairperson.

Module code	Credits	Subject
GKD615	20	Soil chemical principles and applications Outcome: After completion of this module students will be able to apply soil chemical principles in natural and agricultural ecosystems. Contents: The following aspects are dealt with on an advanced level: nature and practical significance of soil colloids; carbon balance of soil and the role of organic matter therein; dynamics and availability of nitrogen, phosphorus and potassium in soils; acid soils and the management thereof; salt-affected soils and the management thereof; and heavy metals in soil and the environmental significance thereof.
GKD625	20	Soil genesis and evaluation Outcome: After completion of this module students will be able to identify, describe and interpret soil properties in relation to land use. Contents: The following aspects are dealt with on an advanced level: concepts of soil, soil properties and soil genesis; philosophy, similarities and differences of selected international soil classification systems; design of soil surveys for specific uses; principles of land evaluation; compilation of land use requirements, interpretation of land characteristics, and matching thereof with land use requirements; properties and behaviour of primary and secondary minerals.
GKD635	20	Soil physical principles and applications Outcome: After completion of this module students will be able to apply soil physical principles in natural and agricultural ecosystems. Contents: The following aspects are dealt with on an advanced level: the description and application of processes related to the soil water balance, namely infiltration, runoff, evaporation from soil and plant surfaces and drainage; soil physical factors influencing root growth; irrigation scheduling and leaching management.
GKD645	20	Soil fertility and fertilisation Outcome: After completion of this module students will have a sound knowledge on soil fertility and fertilisation with regard to agricultural ecosystems. Contents: The following aspects are dealt with on an advanced level: functions of all essential nutrients in plants, including consequences of insufficient and excessive supply; nature, dynamics and availability of all essential nutrients in soils; methods used for evaluation of soil fertility status; fundamental biophysical and economical principles of fertilisation.
GKD693	20	Research project Outcome: After completion of this module students will have the skill to conduct a small research project successfully.

Contents: Every student will conduct under guidance a small research project on a soil science topic. In the process a student will gain experience in the compilation of a research protocol, selection of appropriate methodology, conducting of trials, processing of data, interpretation of results and reaching of conclusions. A student must write a report on the project for evaluation according to an approved procedure.

GKD695	20	<p>Literature review Outcome: After completion of this module students will have the skill to conduct successfully literature reviews. Contents: Every student will conduct literature reviews on soil science topics under guidance. In this process a student will gain experience in the unlocking and synthesis of information as well as the written and oral presentation thereof according to approved procedures.</p>
---------------	----	--

(j) IRRIGATION SCIENCE – B.Sc.Agric.Hons. – Study code 5524 (120 credits)

Only learning programs with specialisation in irrigation science provide admission to this interdisciplinary study field. For this field AGR635, BSB693, BSB695, GKD635 and LWR601 are compulsory. Another module must be selected from AGR615, GKD645 and LWR605 in consultation with the Departmental Chairperson.

Module code	Credits	Subject
AGR615	20	<p>Crop and stress physiology On completion of this module students will have developed their critical reading skills, and will be able to relate stress symptoms in crops with physiological and biochemical mechanisms. In the crop physiology section students will develop a high level of understanding of the physiological principles of dryland crop production, as well as the possibilities of manipulating the physiological and biochemical processes to improve yields. The stress physiology part of the module will enable students to understand the effects of climate change on food production, and gain a deeper understanding of how plants react to various stresses imposed by the environment and production practices.</p>
AGR635	20	<p>Plant-water relations On completion of this module students will have acquired sound knowledge of the soil-plant-atmosphere continuum, root growth and water uptake, the movement of water in plants, measurements of the plant water status, and plant response to water deficit and water logged conditions. Each student is required to prepare and present an assignment on the water requirements of a selected crop by using relevant literature.</p>
BSB693	20	<p>Research project After completion of this module a student will have experience in the integrated planning of irrigation farming. This planning will be conducted under guidance. The soil, climate, agronomy, economy</p>

and engineering aspects must be taken into account. A report covering all aspects of the planning is required.

BSB695	20	Literature review After completion of this module students will have the skill to conduct successfully literature reviews. Every student will conduct literature reviews on irrigation science topics under guidance. In this process a student will gain experience in the unlocking and synthesis of information as well as the written and oral presentation thereof according to an approved procedure.
GKD635	20	Soil physical principles and applications After completion of this module students will be able to apply soil physical principles in natural and agricultural ecosystems. The following aspects are dealt with on an advanced level: the description and application of processes related to the soil water balance, namely infiltration, runoff, evaporation from soil and plant surfaces and drainage; soil physical factors influencing root growth; irrigation scheduling and leaching management.
GKD645	20	Soil fertility and fertilisation After completion of this module students will have a sound knowledge on soil fertility and fertilisation with regard to agricultural ecosystems. The following aspects are dealt with on an advanced level: functions of all essential nutrients in plants, including consequences of insufficient and excessive supply; nature, dynamics and availability of all essential nutrients in soils; methods used for evaluation of soil fertility status; fundamental biophysical and economical principles of fertilisation.
LWR601	20	Agrometeorological services for extension The student will be expected to understand the various communication channels and methods of technology transfer with specific emphasis on weather bulletins and advisories (for the whole range of temporal and spatial scales) for use by farmers, extension officers and policy makers. They will also learn how to conduct a participatory needs assessment survey to determine end-user needs, and how to develop new products from available forecasts and information obtained from meteorologists or climatologists.
LWR605	20	Applied agrometeorology The outcomes of this module will enable students to identify existing or anticipated problems related to the agrometeorological environment. Knowledge acquired by students will equip them to formulate objectives and methods required to tackle specific problems, given the necessary tools, such as seasonal forecasts, advisory reports, etc. Students will gain practical experience by writing a scientific article through acquisition and analysis of data as well as interpretation of results and drawing conclusions. This provides preparation to enter the workplace, equipped to solve agrometeorological problems and apply this knowledge to real-life situations.

INFORMATION**STUDY AIMS**

The aims of this degree are:

- (a) to give the student the opportunity to do in-depth specialisation of his/her choice to broaden his/her knowledge with respect to agriculture, rural development and agricultural management;
- (b) to prepare the student for further post-graduate study;
- (c) to lead the student in independent study of the main subject or field of specialisation; and
- (d) to develop, through the Honours degree in Agricultural Management, the student's managerial skills in a variety of functional areas in agricultural enterprise management and development and the management of agricultural businesses.

Module codes

Attention is drawn to the fact that the numerical parts of the course codes for Honours modules do not have the same meaning as for the undergraduate modules. The alphabetical part indicates the specific subject name. The digit 6 indicates that it is an Honours module and the second and third numbers indicate the specific subject. The date of examination in the specific module will have to be determined after consultation with the specific Departmental Chairperson. When the second digit is a 9, it indicates a seminar/mini dissertation/assignment.

REGULATIONS

Nota Bene: The general regulations for Honours degrees (General Regulations A55 to A78) apply *mutatis mutandis* to this faculty.

Reg. H18 - Admission

- (a) See General Regulation A56.
- (b) A student must have a B.Agric. degree on the condition that he/she can also, with permission of the Dean be allowed, with a qualification that is regarded of equal value to the degree by the Senate, or a qualification that has been achieved on the grounds of a standard of competence or other means regarded as adequate by the dean for the aims of the study; and
- (c) the student must prove to the departmental/centre head that he/she has adequate knowledge to justify admission to this study.
- (d) Apart from the above-mentioned requirements for admission to the degree course, the head of department can also, with written confirmation from the Director: Student Administration, expect a student to complete certain additional courses before the student will be admitted to the study or the degree is awarded.

Reg. H19 - Pass requirements

As specified in the different curricula.

Reg. H20 - Compulsory modules

Apart from the requirements of General Regulation A56 (b), a student will also have to acquire the under-mentioned qualifications before he/she will be admitted to the Honours degree in Agricultural Management:

- (a) basic efficiency in the use of the computer, more specifically in spreadsheet and word processing programmes, and

- (b) students who do not have this efficiency, may simultaneously with the commencement of the study on recommendation of the departmental/centre head and with approval of the Dean of the Faculty, take such a course.

Reg. H21 - Curricula for the B.Agric.Hons. degree

(a) Specialisation in Agricultural Management - Study code 5531

An essay and seven examination papers of two hours each, of which four are written in the first semester (LBB601, LBB602, LBB603 and LBB604) and three in the second semester (LBB605, LBB606 and LBB607) and six oral examinations - two (LBB601 and LBB602) in the first semester and four (LBB605, LBB606, LBB607 and LBB693) in the second semester.

Module code	Credits	Subject
LBB601	12	Advanced Agricultural Management - Economic resources and management; effective management styles, leadership and management; strategic management and information system; analysing the macro and business environment; using the scenario and paradigm shift management tools; organisation; delegation and organising information of the four factors of production; designing an appropriate control system for the production, marketing and financial management functions.

COMPULSORY TOUR: VISIT TO FARMING ORGANISATIONS

LBB602	12	Financial Agricultural Management - Construction and interpretation of financial statements; types and sources of risk, measurement and management of risk; planning and evaluation of an agricultural business; the effect of income tax on a farming business.
LBB603	12	Plant Production Management – physical, economic and financial planning of all cash crops, fruit, vegetables and perennial cultivated (planted) pastures for an agricultural business; collecting data for evaluation of soil; interpreting elementary soil data and evaluation of soil resources suitable for crop production; doing a labour- and kilowatt planning and compiling of enterprise budgets for cash and fodder crops.
LBB604	12	Animal Production Management - physical, economic and financial planning of all livestock (including wildlife), as well as a fodder-flow planning for an agricultural business; sound veld management planning; compiling a fodder-flow programme to integrate veld and planted pastures; designing a basic production management system.
LBB605	12	Strategic Agricultural Marketing Management - the development of marketing strategies for successful farming.
LBB606	12	Strategic Human Resources Management in Agriculture - the development of strategies to improve productivity of human resources on farming level.

LBB607	12	Association Agreements and Agribusiness Management - an evaluation of different association agreements that can be used in agriculture; much attention is given to agribusiness management of a farming operation in a changing environment. COMPULSORY TOUR: VISIT TO AGRIBUSINESSES
LBB693	36	Integrated Agricultural Planning - it focuses on the integration of all aspects of an agricultural business (whole-farm planning) where a farm planning module must be developed in a mini-project.

(b) Specialisation in Irrigation Management - Study Code 5532 (120 credits)

An examination of three hours in each of, BSB601, BSB602 and BSB603 must be written, while a mini dissertation on a project assignment in BSB693 is compulsory. One examination of two hours each in LBB609A (Advanced Agricultural Management) and LBB609B (Financial Agricultural Management).

Module code	Credits	Subject
LBB609	24	Advanced Agricultural Management (LBB609A) and Financial Agricultural Management (LBB609B) LBB609A: Economic resources and management; effective management styles, leadership and management; strategic management and information system; analysing the macro and business environment; using the scenario and paradigm shift management tools; organisation; delegation and organising information of the four factors of production; designing an appropriate control system for the production, marketing and financial management functions. LBB609B: Construction and interpretation of financial statements; types and sources of risk, measurement and management of risk; planning and evaluation of an irrigation farming business; the effect of income tax on an irrigation farming business.
BSB601	24	Evaluation of soil and water for irrigation suitability. Knowledge on the influence of the climate on the selection of irrigated crops. Management of the soil water balance. The student must be familiar with the soil-plant-atmosphere continuum under irrigation and the effect of irrigation on the environment.
BSB602	24	Knowledge on the maintenance of soil fertility, integrated pest control and rotation of crops under irrigation. Quantification of water requirements and usage of irrigated crops and the identification of methods for irrigation scheduling.
BSB603	24	The student must be familiar with making choices, design, installation, evaluation and management of irrigation systems. Analysis and evaluation of electrical motors and electrical usage of irrigation systems.

BSB693 24 Research: Integrated planning of irrigation farming, and taking in account the soil, climate, agronomy, economy and engineering aspects.

(c) Specialisation in Wildlife Management - Study Code 5533 (120 credits)

Four papers of three hours in NLB601, NLB602 and NLB603, as well as the integrating of the theoretical principles of wildlife management in a practical assignment/project (NLB693) is required. Two examinations of two hours each in LBB609A (Advanced Agricultural Management) and LBB609B (Financial Agricultural Management).

Module code	Credits	Subject
LBB609	24	Advanced Agricultural Management (LBB609A) and Financial Agricultural Management (LBB609B) LBB609A: Economic resources and management; effective management styles, leadership and management; strategic management and information system; analysing the macro and business environment; using the scenario and paradigm shift management tools; organisation; delegation and organising information of the four factors of production; designing an appropriate control system for the production, marketing and financial management functions. LBB609B: Construction and interpretation of financial statements; types and sources of risk, measurement and management of risk; planning and evaluation of an irrigation farming business; the effect of income tax on an irrigation farming business.
NLB601	20	Veld and Game Ecology - the identification and analysis of ecological game farming areas and familiarity with ecosystem characteristics. The student must be adjusted to physiological, phenological and ecological principles of the management of the grassland ecosystem. Population dynamics of game, including aspects such as knowledge of game species, social behaviour, reproduction, habitat preferences, diet selection and grazing habits.
NLB602	20	Applied Habitat Evaluation - the student must have knowledge of the principles, applications and limitations with regard to important wildlife management and research techniques. Practical skills on techniques to determine primary production, veld condition and grazing capacity of the grass and tree layer. The student must be familiar with techniques to determine fodder intake and feeding preferences of game species.
NLB603	20	Applied Wildlife Management - the student must have knowledge of the physical planning of a game farm, including fencing requirements, handling facilities, minimum farm sizes and legal aspects. The student must also be familiar with game capture, immobilisation, transport and handling of stress, game diseases and parasitology. The evaluation and analysing of game-utilisation, including all aspects of hunting and life sales, as well as processing of game-products.
NLB693	20	Short research essay - Integrated planning of a game farm/reserve where various aspects of wildlife management will be applied practically. Its objective is to solve management problems and to ensure the sustainable utilisation of the natural resources.

MASTER'S DEGREES

Degrees

The following Master's degrees are awarded in the Agriculture Programme:

Degree	Minimum study period	Abbreviation	
Magister Scientiae Agriculturae	1 year	M.Sc.Agric.	
Magister in Sustainable Agriculture in Disaster Management	2 years	M.S.A.	Magister
Magister Agriculturae	2 years	M.Disaster Management	
	1 year	M.Agric	

MAGISTER SCIENTIAE AGRICULTURAE

M.Sc.Agric.

INFORMATION

STUDY AIMS

The aims of this degree study are:

- to offer the candidate the opportunity of increasing his/her knowledge of a specific field within the discipline concerned;
- to guide the candidate in the planning and execution of a research programme;
- to train the candidate in the collection, and interpretation of research results and writing of scientific papers;
- to guide the candidate towards conducting independent research and communicating research results; and
- to develop the candidate's management skills concerning integrated application of acquired knowledge and skills in actual situations, namely the running of farming enterprises and processing of agricultural products.

- Students who enroll for the Master's degree by dissertation, register under the code 5722.
- Students who enroll for the one year structured Master's degree, register under the code 5723.

Module codes

A candidate who registers for the M.Sc.Agric. degree and who plans to submit a dissertation (180 credits), uses one of the following codes:

For the M.Sc.Agric. in:

Agricultural Economics	LEK700
Agrometeorology	LWR700
Agronomy	AGR700
Animal Science	VKD700
Biochemistry	BOC700
Biotechnology	BTG700
Entomology	BTG700
Food Science	VWS700
Genetics	GEN700
Grassland Science	WDK700

Horticulture	HRT700
Irrigation Science	BSD700
Plant Breeding	PLT700
Plant Pathology	PPG700
Soil Science	GKD700

A candidate must do research on an approved topic for at least two semesters, in consultation with the Departmental Chairperson, in preparation for a dissertation that shall be submitted as the only requirement for the degree.

The candidate will present at least one seminar/research report in each year in accordance with departmental regulations.

REGULATIONS

Nota Bene: The general regulations regarding Master's degrees (General Regulations A79 to A107) apply to this faculty *mutatis mutandis*.

Reg. H22 - Admission

- (a) See General Regulation A80.
- (b) According to General Regulation A80, a candidate, in order to qualify for admission to the M.Sc.Agric. studies, has to
 - (i) have a B.Sc.Agric.Hons. degree; and
 - (ii) convince the head of the department/centre concerned that he/she has adequate knowledge of the subject to justify admission to the studies.

Reg. H23 - Method of presentation

- (a) See General Regulation A86.
- (b) For candidates holding a B.Sc.Agric.Hons.-degree a dissertation is required, except in the Department of Agricultural Economics's Centre for Agricultural Management where a dissertation or a mini dissertation and examination papers, may be required.
- (c) Candidates must please pay attention to General Regulation A89 regarding the dissertation requirements.
- (d) Candidates will present at least one research report seminar in each year of study in accordance with departmental regulations.

Reg. H24 - Year mark/semester mark/pass requirements

- (a) See General Regulation A92.
- (b) No year mark/semester mark is required for the mini dissertation and examination papers.
- (d) When considering the final mark for purpose of a degree, the weight of each module will be calculated according to the percentage of it's credits relative to the total for the degree.

Reg. H25 - Curricula for the Master's degree in the Department of Agricultural Economics

Admission to the study is subject to the approval of the Departmental Chairperson and a post graduate selection committee, which will be based on a satisfactory study record and appropriate qualification already obtained. Before acceptance for the M.Sc. Agric. Degree a student must also provide proof of successful completion of LEK601, LEK602, LEK603 and LEK604. The Departmental

Chairperson may require additional subjects/modules to be completed before the admission to the M.Sc.Agric. study.

Requirements for M.Sc.Agric. in Agricultural Economics:

Candidates with an applicable Honours degree:

Option 1 A dissertation (LEK700, 180 credits) (Study code 5722)

Option 2 At least two modules (15 credits each) and an extended research essay (LEK791, 150 credits) (Study code 5723).

INFORMATION**STUDY AIMS**

The aim of this multi- and interdisciplinary postgraduate degree in Sustainable Agriculture course is to present training in the development, maintenance and management of sustainable agricultural production systems. This process involves the sustainable utilisation of natural, economic and human resources for the production of sufficient and safe food and fibre products in all the climatic conditions of Southern Africa, but particularly the high-risk semi-arid regions. Applicable research will stimulate analytical and critical thought.

- Students register under the code 5710

REGULATIONS

Nota Bene: The general regulations in respect of Master's degrees (General Regulations A79 to A107 applies *mutatis mutandis* to this faculty.

Reg. H26 - Admission

- See General Regulation A80.
- In addition to the provisions of General Regulation A80, a candidate who wishes to enrol for the M.S.A., must have one of the following:
 - an applicable three-year degree plus applicable practical experience and/or applicable preparatory studies;
 - an applicable four-year degree plus applicable practical experience and/or applicable preparatory studies; or
 - an applicable honours degree or an honours degree and applicable studies and/or practical experience.

Nota Bene: The scope, nature and applicability of practical experience and preparatory study in (a) and (b) above will be determined by the Director of the Centre for Sustainable Agriculture.

Reg. H27 - Method of presentation, evaluation and examination

- See General Regulations A86, A94, A95 and A96.
- Modules are presented with limited contact by means of assignments and residential sessions.
- This training programme consists of five compulsory modules, three optional modules and an extended research essay consisting of a module on research methodology, a complete research project proposal and a final research report in the form of an extended research essay or article.
- Examination (written and/or oral) is done by means of a formal examination as well as the assignments of each theoretical module. The extended research essay is presented and examined under supervision of a supervisor and supervision committee.
- Modules will be offered as year or semester modules as indicated in the different study guides.

Reg. H28 - Year mark and pass mark

- (a) See General Regulations A92 and A93.
- (b) A year mark for admission to the examination is required for all the modules.
- (c) The manner in which a year mark and pass mark is calculated and whether a sub-minimum is required for parts of a module are contained in the respective study guides for each module.

Reg. H29 - Duration of study

The study is presented over a minimum period of two years, during which 240 credits must be earned.

Reg. H30 - Learning programme contents**Schematic representation of learning programme content****Core modules**

Module code	Module theme	Credits
MVL720	Introduction to sustainable agriculture and rural development	12
MVL721	Research methodology	12
MVL722	Natural agricultural resources and the environment	24
MVL723	Sustainable utilisation of natural agricultural resources	24
MVL752	Strategic Management and Planning in Agriculture	24

Choice modules: Three modules (24 credits each) from any focus area**Focus areas**

Rural development	Value added	Agribusiness management	Plant production	Animal production
MVL730	MVL740	MVL750	MVL761	MVL770
MVL731	MVL741	MVL751	MVL762	MVL771
MVL732				
MVL733				

Extended research essay

MVL791 extended research essay (72 credits) or MVL792 Short research essay (24 credits) + MVL793 research essay/article (48 credits)

- (i) **Compulsory modules (MVL720, MVL721, MVL722, MVL723 and MVL752 as well as the extended research essay as research component with credits as indicated separately:**

Module Code	Module Theme	Module Contents
MVL720	Introduction to Sustainable Agriculture and Rural Development	After completing this course the student will be able to understand and evaluate the dynamics of Sustainable Agriculture and Rural Development.

MVL721	Research Methodology	Students will be equipped with knowledge and skills to formulate a research project, to unravel it in components, to gain various techniques to gather data and, as a result, deliver a significant report.
MVL722	Natural Agricultural Resources and the Environment	After completing this module the student will be able to evaluate the characteristics of soils and pastures, which serves as indicators of the quality of the resources, to select sustainable agricultural systems, as well as to explain climate, vegetation and energy as natural resources.
MVL723	Sustainable Utilization of Natural Agricultural Resources and the Environment	Students will gain knowledge and insight into the sustainable utilization of natural resources, climate, soil, pastures and energy to the efficient use for people without damaging the resources.
MVL752	Strategic Management and Planning in Agriculture	After completing this module the students will be able to understand the principles and processes of strategic management, marketing and planning and to develop a strategic marketing plan.

(ii) Choice modules (24 credits each): [three modules out of any focus area]

(a) Focus area 1: Rural development

MVL730	Rural Economic Development	Student will gain insight into the rural characteristics of poverty and decay. Students will be able to select and evaluate alternative strategies to develop and increase food security and economic growth under limited circumstances.
MVL731	Rural Sociology	Students will be able to understand the dynamics of population growth and pressure as variability's in a sustainable community structure and to integrate it with social poverty and sustainable rural development.
MVL732	Agriculture Technology for Developing Countries	Students will be able, among other things, to design and develop different irrigation-practices, to evaluate technology in developing regions and to suggest suitable adjustments.
MVL733	Communication and Technology transfer for Sustainable Agriculture	After completing this module, students will have confidence in the principles of communication and technology transfer, the context of communication and communication strategies in respect of technology transfer.

(b) Focus area 2: Value adding and marketing

MVL740	Agricultural Product Processing and Preserving	After completing this module the students will be able to understand the physical methods of food processing and to be able to apply the principles of processing dairy and meat products, vegetables, fruit, as well as cereals, legumes and grains in the practice.
MVL741	National and International Agricultural Marketing	Students will be able to understand the marketing environment where-in agriculture operates, as well as the national and international contexts. The student will acquire skills that relates to the analysis of markets and trades, as well as the composition of marketing strategies.

(c) Focus area 3: Agribusiness management

MVL750	Farm Management for Sustainable Agriculture	The students will be able to implement financial and risk management systems and analyse and interpret management information systems. Skills in terms of the manager, the management process and personnel management will be acquired.
MVL751	Integrated Sustainable Agricultural Production Systems	The students will be equipped for the use of model simulation for decision-making in agriculture sustainable production systems.

(d) Focus area 4: Plant production

MVL761	Sustainable Plant Production Systems	This module will enable the student to implement sustainable crop succession practices through strategic crop and cultivar choices, soil tillage, plant nutrition and water management and utilization. This module deals with both agronomical and horticultural plant production systems.
MVL762	Integrated Pest Management	After completing this module the student will be able to apply the principles and to implement control strategies for an integrated and sustainable management of pests and diseases with crops.

(e) Focus area 5: Animal production

MVL770	Sustainable Livestock Production Systems	This module will enable the student to apply the three dimensions of livestock production namely nutrition, reproduction physiology and animal breeding within an intensives and extensive production system.
---------------	--	---

MVL771	Sustainable Wildlife Production Systems	Students will be able to gather knowledge regarding the specific nutrition needs of different wildlife species and to learn skills and to develop and sustain such a production systems on a sustainable way.
---------------	---	---

(iii) Compulsory dissertation or alternative option (60 credits)

Candidates have a choice between undermentioned alternatives in order to complete their studies obtaining 72 credits

(a) Alternative 1: Extended research essay

MVL791	Extended research essay	With the script the students will illustrate the skills they have acquired, and the competence and proficiency to determine, identify and integrate all the factors of sustainability in an agriculture system.
---------------	-------------------------	---

(b) Alternative 2: Research project proposal (24 credits) and research report or research article (48 credits)

MVL792	Short research essay/Proposal	By the means of the four themes within this module, students will acquire skills to formulate a significant project proposal, which will lead to the accomplishment of a research report.
---------------	-------------------------------	---

MVL793	Research essay/Article	The final output of the research project will be covered through a scientific report in the form of a research essay or article.
---------------	------------------------	--

EQUIVALENT MODULES

MVL701 equivalent to MVL720 and MVL722
MVL702 equivalent to MVL723
MVL703 equivalent to MVL770
MVL704 equivalent to MVL724 or MVL730
MVL705 equivalent to MVL731
MVL706 equivalent to MVL740
MVL707 equivalent to MVL770
MVL708 equivalent to MVL761
MVL709 equivalent to MVL750
MVL710 equivalent to MVL751
MVL711 equivalent to MVL752
MVL712 equivalent to MVL733
MVL713 equivalent to MVL721
MVL714 equivalent to MVL762
MVL791 class attendance gives recognition to MVL721

INFORMATION**STUDY AIMS**

The main aim of the programme is to provide disaster management practitioners, or those who may have future disaster management responsibilities, training in a holistic approach towards disaster management to enable them to manage all kinds of disasters by implementing proactive disaster management strategies in terms of relevant legislation, policies and directives, and effectively co-ordinate relief and recovery programs.

- Students register under the code 5703

REGULATIONS

Nota Bene: The general regulations in respect of Master's degrees (General Regulations A79 to A107 applies *mutatis mutandis* to this faculty).

Reg. H26(a) - Admission

- (a) See General Regulation A80.
- (b) In addition to the provisions of General Regulation A80, a candidate who wishes to enrol for the Master in Disaster Management, must have one of the following:
 - (i) an appropriate three-year degree plus appropriate practical experience and/or preparatory studies, or
 - (ii) any other relevant degree, e.g. four-year and/or Honours degree or a relevant professional qualification equivalent with practical and/or preparatory experience will also allow candidates to read for the Master' in Disaster Management degree.

Nota Bene: An Executive Committee of DIMTEC would assess the extent, nature and suitability of experience and preparatory studies mentioned above.

Reg. H27(a) - Method of presentation, evaluation and examination

- (a) See General Regulations A86, A94, A95, A96.
- (b) Candidates will have three formal contact sessions of five days each year. During the first contact session, candidates will be orientated and will receive all module material for the first year.
- (c) The programme consists of eight compulsory modules, two electives and a research project reported in an extended research essay format.
- (d) The programme will be structured in modules and will require practical assignments to be completed by candidates and submitted at predetermined dates. Assignments will be marked and graded by the lecturers, who will give candidates feedback in a written format and also orally during contact sessions. Assignments will be part of a continuous evaluation process. Apart from the assignments a formal evaluation (written or oral) will take place at the end of each semester, normally during June and November.

Candidates who are unable to successfully complete the second year of the Master in Disaster Management will be able to exit the course with an **Advanced Diploma in Disaster Management**, under the precondition that the candidate has successfully completed the eight compulsory modules for the first year of the Master in Disaster Management.

Reg. H28(a) - Year mark and pass mark

- (a) See General Regulations A92 and A93.
- (a) A year mark for admission to the examination is required for all the theoretical modules.
 - (b) The way in which a year mark and pass mark is calculated and whether a sub-minimum is required for parts of a course is contained in the respective study guides for each module.

Reg. H29(a) - Duration of study

The module can be offered over a minimum period of two years (full time). However, candidates will be allowed to take the module over a three-year period (part time) by registering for fewer subjects per year. Prospective part-time candidates need to clarify their part-time studies with the Director of DIMTEC.

Reg. H30(a) - Learning programme**First Semester**

Module Code	Subject
DIM601	Research Methodology
DIM602	Hazards and Disaster Management
DIM603	Strategic Disaster Management
DIM604	Disaster Management principles and practices

Second Semester

Module Code	Subject
DIM605	Disaster Risk Management
DIM606	Information Technology in Disaster Management
DIM607	Public Health
DIM608	Management of natural and human-made disasters

SECOND ACADEMIC YEAR**Compulsory**

DIM791	Extended research essay
--------	-------------------------

Electives (choose any two):

Module Code	Subject
DIM701	Trauma Management
DIM702	Political Strategic Planning
DIM703	Information Management
DIM704	Ethnic and Cultural Conduct
DIM705	Management of media relations
DIM706	Environmental risk and impact assessment
DIM707	Disaster vulnerability and risk assessment

CONTENTS OF MODULES**DIM601 - Research Methodology (24 credits)**

Development of knowledge and skills of candidates to conduct qualitative and quantitative research. Planning, design and management of practical research. Understanding participatory action research (PAR). Construct and present a project proposal for mini-dissertation.

DIM602 - Hazards and Disaster Management (16 credits)

Understand disaster hazards and how they pose disaster threats. Categories and characteristics of disaster threats. Learning about environmental and other hazards; identification, description and management of all potential hazards that may occur in the area of responsibility.

DIM603 - Strategic Disaster Management (16 credits)

Understanding the application of the principles and procedures of strategic management in the domain of disaster management. Strategic management principles, methods and tools. Develop strategic thinking in the field of disaster management. Improving the quality of humanitarian environmental assessment, planning, organising, leadership and monitoring and evaluation of all role-players in disaster management.

DIM604 - Disaster Management principles and practices (20 credits)

Consider most important factors that need attention for the implementation of Disaster Management. National and International Disaster Management Legislation, key factors, principles and ethics consideration for effective planning, controlling, co-ordinating, monitoring and implementing Disaster Management.

DIM605 - Disaster Risk Management (12 credits)

Execution of a qualitative and quantitative risk and vulnerability assessment. Integrated risk and resources assessment. Hazard mapping. Determining of potential disaster losses. Establish levels of acceptable risk. Utilising GIS as a means to manage risk and vulnerability assessment.

DIM606 - Information Technology in Disaster Management (8 credits)

Understanding the link between decision making and information. Understanding and classify information systems that can have an impact on the dynamic disaster environment. Demonstrate the process of the development of a Management Information System. Understand the concept of simulation in decision-making for disaster management. Demonstrate how different information technologies could be used in disaster management.

DIM607 - Public Health (12 credits)

Understanding concepts related to Public Health with regard to biological, community health and psycho-social and certain mental health implications of disasters. Biological warfare, Veterinary risks; Epidemiology: Community assessment, infection control and prevention disease. Handling and management of health risks during disasters and/or conflict. Psycho-social aspect of HIV/AIDS and Mental health burnout.

DIM608 - Management of natural and human-made disasters (12 credits)

Understanding the critical common factors in responding to disasters. Demonstrate the management principles of at least four natural and four human-made disasters. Assessing of hazards and risk. Vulnerability analysis. Determining the potential impacts of disasters. Social-, economics and environmental impact. Formulating of hazard and risk reduction strategies. Formulating prevention and mitigation strategies.

DIM701 - Trauma Management (16 credits)

The management of crisis intervention and trauma management to support victims of traumatic incidents. Posttraumatic-stress and burn-out resulting from long-term exposure to traumatic incidents and the emotional distress of victims of trauma. Action strategies for crisis workers. Coping strategies and management principles of natural disasters, human made disasters, family and sexual violence and injury, chronic and life-threatening illness.

DIM702 - Political Strategic Planning (16 credits)

The main aim of this module is the development of sophisticated techniques within the context of political environmental analysis with specific emphasis on forecasting. Specific attention will be given to scenario development as a technique for predicting the future.

DIM703 - Information Management (16 credits)

This module pays pertinent attention to information needed within the organisational context. The importance of information to the manager, how he/she applies it, how the information is retrieved and from what type of sources are only a few of the issues which will be discussed. Applications of information in the industry, information systems and their management, as well as the integrity thereof will be explored.

DIM704 - Ethnic and Cultural Conduct (16 credits)

The nature and development of human settlement. The nature of settlement in Africa. Indigenous settlement patterns. Formal and informal urbanisation. Anthropology of poverty. Ethnography of urbanisation. The ethnic and cultural influences on human settlements in multi-cultural urban environments. Problems created by the present tendencies in urban settlement from an anthropological perspective.

DIM705 - Management of media relations (16 credits)

Understanding the influence of old-fashioned charity approach and the rights-based approach to the provision of humanitarian assistance has on public participation. Role of communities in all phases of disaster management if public participation programme is planned and co-ordinated effectively. Risk communication. Releasing information to the community.

DIM706 - Environmental risk and impact assessment (16 credits)

Environmental damage assessment: damage risk assessments on humans lives, farm and range lands, water and aquatic lives and air, vegetation and stratosphere. Post damage assessments. Pre- and post-damage remedies. Social dimensions of environmental degradation; drought risks and impacts on food production and supply, disease epidemics, political conflicts, refugees and pollutant emissions. Economic impacts of disasters; economic risk assessment, valuing of disaster damage (cost-benefit analysis and environmental impact assessment) and forecasting of disaster risks. Biological and biophysical aspects of environmental degradation; pests and diseases attack, microorganisms as polluting agents of food and drinks, microorganisms roles in biodegradation. Policy dimensions to environmental disasters.

DIM707 - Disaster vulnerability and risk assessment (16 credits)

Quantitative method to determine vulnerability and risks. Case studies to determine the vulnerability of communities and communities at risk. Actuary probability theory. Determining the probable disaster loss. Using vulnerability and risk assessment to formulate prevention and mitigation strategies.

DIM791 - Extended research essay (90 credits)

INFORMATION**STUDY AIMS**

The aims of this degree study are:

- (a) to present specialised post-degree agricultural management training;
 - (b) to guide the candidate in such a way that he/she will be able to successfully integrate, communicate and apply the principles, concepts and knowledge of agricultural and management science;
 - (c) to enhance applicable research skills in order to enable the candidate to qualify as a specialist in his/her field.
- Students who enroll for the Master's degree by dissertation, register under the code 5725.
 - Students who enroll for the one year structured Master's degree, register under the code 5726.

Module codes

A candidate who registers for the M.Agric. degree and presents a dissertation (180 credits), must use one of the following codes:

Agricultural Management	LBB700
Irrigation Management	BSB700
Wildlife Management	NLB700

REGULATIONS

Nota Bene: The general regulations regarding Master's degrees (General Regulations A79 to A107) are *mutatis mutandis* applicable to this faculty.

Reg. H31 - Admission

- (a) See General Regulation A80.
- (b) Apart from the definition of the General Regulation A80, a candidate must in order to be admitted to the M.Agric. modules:
 - (i) convince the specific Departmental Chairperson that he/she has enough knowledge of the subject in order to be admitted to the modules.
 - (ii) be in possession of a B.Agric.Hons. degree or equivalent qualification;

Reg. H32 - Method of presentation

- (a) See General Regulation A86.
- (b) For candidates holding a B.Agric.Honours degree a dissertation (BSB700, LBB700 or NLB700) is required, or an extended research essay in Agricultural Management (LBB791), plus two examination papers of three hours each in research methodology (LBB701) and strategic and risk management (LBB702).
- (c) Candidates must give attention to the General Regulation A89 on the regulations for the compiling of dissertations.

Reg. H33 - Year mark/semester mark/pass requirements

- (a) See General Regulation A92.
 - (b) No year mark/semester mark is required for the extended research essay and examination papers.
 - (c) When considering the final mark for purpose of a degree, the weight of the different modules will be calculated according to the percentage of its credits relative to the total for the degree.
-

DOCTOR'S DEGREES

Degrees

The following Doctor's degrees are awarded in this faculty:

Degree	Minimum study period	Abbreviation	Study code
Philosophiae Doctor	2 years	Ph.D.	5910
Doctor Scientiae	See regulations	D.Sc.	5920

PHILOSOPHIAE DOCTOR

Ph.D.

INFORMATION

STUDY AIMS

This graduate study aims at:

- (a) providing the candidate with the opportunity to prove her/his ability to plan and do research independently and to report the results;
- (b) enabling the candidate to make an original contribution to the respective discipline.

Module codes

A candidate who registers for the Ph.D. degree (360 credits) uses one of the following codes:

Agricultural Economics	LEK900
Agricultural Management	LBB900
Agronomy	AGR900
Agrometeorology	LWR900
Animal Science	VKD900
Biochemistry	BOC900
Biotechnology	BTG900
Entomology	ENT900
Genetics	GEN900
Food Science	VWS900
Grassland Science	WDK900
Horticulture	HRT900
Irrigation Management	BSB900
Irrigation Science	BSD900
Plant Breeding	PLT900
Plant Pathology	PPG900
Soil Science	GKD900
Sustainable Agriculture	VHL900
Wildlife Management	NLB900

REGULATIONS

Nota Bene: The general regulations regarding Doctor's degrees (General Regulations A108 to A126) apply to this faculty *mutatis mutandis*.

Reg. H34 - Admission

- (a) See General Regulation A109.
- (b) Candidates must apply at the Departmental Chairperson on the prescribed form for admission to Ph.D. studies.
- (c) In terms of the stipulations of General Regulation A109 a student in order to qualify for admission to Ph.D. studies, must:
- (d) have a M.Agric. or M.Sc.Agric. or M.S.A. degree; and
- (e) convince the Departmental Chairperson concerned beforehand that he/she has sufficient knowledge of the subject to warrant admission.

Reg. H35 - Learning programme composition and duration of study

- (a) See General Regulation A113.
- (b) A thesis (360 credits) is required, the topic of which must be chosen in consultation with the head of the department.
- (c) A candidate does research for at least four semesters on an approved topic selected in consultation with the Departmental Chairperson in preparation of a thesis which serves as the only requirement for the degree. The candidate will present at least one seminar/research report in each year of study in accordance with departmental regulations.

Reg. H36 - Presentation and examination

- (a) See General Regulation A115.
- (b) According to General Regulation A115(b) a thesis is required.

Reg. H37 - A candidate who is admitted to Master studies according to Reg. A80, may apply for admission to the Ph.D. degree in consultation with the supervisor after a study and registration period of at least one year and on recommendation of the Examination Committee, the head of the department concerned and the Research Committee of the Faculty via the Dean. After admission to the Ph.D. study, at least two years must elapse before a Ph.D. degree can be awarded. The degree study therefore lasts three years.

The M.Agric, M.Sc.Agric. or M.S.A. degree may be awarded to a candidate if:

- (a) the candidate rescinds his/her candidature for the Ph.D. degree; or
- (b) if his/her candidature for the Ph.D. degree is cancelled; or
- (c) if the candidate does not meet the requirements for the Doctor's degree.

DOCTOR SCIENTIAE
Study Code 5920

D.Sc.

REGULATIONS

Reg. H38 - General Regulations A127 to A132 regarding the Doctor Scientiae applies to this faculty *mutatis mutandis*.
